A Commissioner for taking Affidavits  
within the Province of British Columbia

## Environmental Footprint

Catalyst Paper specializes in lighter basis weight papers — products with superior strength, press performance and runnability that have been manufactured in an environmentally sustainable way. Further, with a 100% recycled fibre mill in Snowflake, Arizona, Catalyst is one of the premier recycled paper operations in North America.

### Our Commitment

Catalyst maintains a longstanding commitment to social and environmental responsibility. Our ongoing alliances and engagement with projects such as the Coast Forest Conservation Initiative, and partnerships with environmental organizations such as the WWF have positioned us as a business leader on issues related to environment and sustainability.

### Our Footprint

Lighter basis weight paper is a responsible environmental choice because it requires fewer resources: less fibre, fewer raw materials, and less energy for production, shipping and printing. It also means more paper from each roll, fewer roll changes, fewer pastings, and greater efficiency of storage — all of which adds up to a greater product efficiency and a lower environmental impact.

We maintain a low carbon footprint by using 89% renewable energy at our BC operations. We have also reduced greenhouse gas emissions by 85% from 1990 baseline figures, allowing us to affordably offer Catalyst Cooled manufactured carbon neutral specialty papers.

Further, through 100% recycled fibre use at our Snowflake, Arizona mill — and by supplying our U.S. paper customers from that mill — we offer freight-logical solutions all over western North America, as well as recycled products that carry a valued environmental pedigree.

### Our Fibre

None of our fibre comes from the Boreal forest, nor is it genetically modified or illegally harvested. Of the fibre delivered to our BC mills in 2010, 57% was certified to PEFC recognized standards, while about 80% of fibre delivered to our Snowflake recycling mill met FSC® post-consumer criteria. Recovered paper made up 16% of our fibre supply in 2009. FSC and PEFC chain of custody systems are also in place to provide transparency

and assurance that select paper products are made of fibre from recycled or certified fibre sources.

### **Our Processes**

Catalyst produces bulky, lightweight, high opacity papers that are efficiently manufactured using fewer resources and creating less waste. Our mechanical papers are produced with 95% groundwood pulp compared to freesheet paper manufacturers who use only 50% groundwood pulp — this means Catalyst uses far fewer chemicals than freesheet paper manufacturers.

## Environmental Performance

Catalyst manufactures a broad range of high quality mechanical printing papers applying proven, sustainable and efficient business practices. All of our mills are registered to the ISO 14001 environmental management system standard, and we conduct independent biennial environmental audits at our operations.

Catalyst has a company-wide Environment Policy, a board-level committee that monitors compliance and a forum of environmental representatives from each mill to put the policy into operation.

---

### Environmental Policy Statement from the CEO

Catalyst Paper is accountable for the effect of its operations on the environment and we accept responsibility for conserving, sustaining and making efficient use of the resources we consume.

While the company's products play an important role in society, we are mindful that they must also represent the highest standards of environmental integrity we can provide.

Catalyst is committed to the principle of continuous improvement and reviews its policies and practices against external benchmarks with the help of independent advisors and partners. We work cooperatively and collaboratively with those who contribute positively, through advice or criticism, to improving our environmental performance. Day-to-day, the responsibility for environmental performance rests with all employees.

In applying this policy, Catalyst commits to:

- Adhere to the principles of conservation and sustainability
- Meet the requirements of relevant environmental legislation and other voluntary programs
- Be fully transparent in publicly disclosing our environmental performance
- Reduce pollution at its source
- Set objectives and targets to support continual improvement of our environmental performance
- Operate our facilities with respect for the values of surrounding communities
