

PricewaterhouseCoopers: Renewables Deals* 2008 Annual Review - Mergers and acquisitions activity within the global renewable power market - all published transactions

Renewables Deals includes analysis of all global renewable power sector deal activity. We define this as all deals relating to power generation by biofuels (incl. biomass, biodiesel and ethanol), solar, wind, hydro, tidal/wave and geothermal sources. We include deals relating to manufacturers and developers of renewable technologies (for example, wind turbine manufacturers and solar technology firms), which we identify in a separate 'technology' category. We exclude deals relating to nuclear power assets, those centred on energy efficiency, and purchases of development rights.

The analysis is based on published transactions from the Dealogic 'M&A Global' database, December 2008 and the John S. Herold Inc. 'M&A database', December 2008. Both datasets have been used to ensure completeness. Where deals appear in both the data is based on that recorded in the Herold database. For consistency purposes, identical search criteria are used for both datasets. Analysis encompasses announced deals, including those pending financial and legal closure and those which are completed. Deal values are the consideration value announced or reported including any assumption of debt and liabilities. Figures relate to actual stake purchased and are not multiplied up to 100%.

The location of the assets being acquired determines the analysis location. We define Asia Pacific as excluding the Russian Federation, Australia and New Zealand. All presented numbers of deals exclude all of those deals with no reported value.

PricewaterhouseCoopers: Renewables Deals* 2008 Annual Review - Mergers and acquisitions activity within the global renewable power market - all published transactions

Renewables Deals includes analysis of all global renewable power sector deal activity. We define this as all deals relating to power generation by biofuels (incl. biomass, biodiesel and ethanol), solar, wind, hydro, tidal/wave and geothermal sources. We include deals relating to manufacturers and developers of renewable technologies (for example, wind turbine manufacturers and solar technology firms), which we identify in a separate 'technology' category. We exclude deals relating to nuclear power assets, those centred on energy efficiency, and purchases of development rights.

The analysis is based on published transactions from the Dealogic 'M&A Global' database, December 2008 and the John S. Herold Inc. 'M&A database', December 2008. Both datasets have been used to ensure completeness. Where deals appear in both the data is based on that recorded in the Herold database. For consistency purposes, identical search criteria are used for both datasets. Analysis encompasses announced deals, including those pending financial and legal closure and those which are completed. Deal values are the consideration value announced or reported including any assumption of debt and liabilities. Figures relate to actual stake purchased and are not multiplied up to 100%.

The location of the assets being acquired determines the analysis location. We define Asia Pacific as excluding the Russian Federation, Australia and New Zealand. All presented numbers of deals exclude all of those deals with no reported value.
