

More Innovation, More Value, More Certainty

PwC + Oracle Supply Chain and Asset Lifecycle Management Solutions

Operational excellence drives competitive advantage

Companies face increased pressure to boost revenue, reduce operations costs, and promote communication and collaboration across the enterprise. All, while meeting unrelenting customer expectations and demands.

How can the supply chain keep up?

PwC works with market-leading companies to transform their supply chains to meet these challenges, drive operational and innovation excellence, and gain a competitive edge. As business integrators with system integrator capabilities, we help clients solve complex supply chain problems from strategy through execution.

Leveraging Oracle technology, we help companies synchronize their project planning, management, and operations objectives with enhanced supply chain capabilities. Historically, our clients have been able to deliver projects and services faster, with higher predictable profit margins.

PwC’s solutions help companies...

- Reduce cost
- Move toward competitive advantage
- Attract clients and grow market share
- Get more from technology investments
- Establish the right supply chain strategy
- Manage supply chain risk

Integrated Business Planning Solutions

PwC’s solutions can help enhance visibility, collaboration, and drive financial performance improvements

Today’s integrated planning process is often based on blood, sweat, and spreadsheets. But spreadsheet models aren’t able to capture operational constraints and financial impact. They’re not transparent to business users. And, they don’t allow for trade-off and risk analysis needs. PwC helps companies deliver a revenue forecast against their current operating performance. In the past, companies have experienced these types of results:

- Improved accuracy and alignment of both sales and operations planning (S&OP) and financial plans
- Achieved faster response to changing supply or demand business conditions
- Reduced operating costs, inventory, and CAPEX spend (by more quickly understanding operational implications of changing financial targets)
- Decreased revenue and earnings surprises

Project-Driven Supply Chain Solutions

We can help deliver projects or manufactured solutions faster with higher, predictable profit margins

PwC’s seasoned practitioners leverage industry and supply chain knowledge, combined with Oracle technology for project portfolio management and supply chain planning. We work with customers to help them improve project margins and on-time completion rates, reduce project supply chain costs, and decrease program risk. Typically, companies can reap these types of benefits:

- Consistently delivered projects or solutions on time
- Realized revenue through proactive/preventative collaboration
- Utilized resources more effectively
- Managed projects with lower inventory and less risks

Asset Lifecycle Management Solutions

Our solutions can help increase return on assets, reduce costs, meet increasing regulatory requirements, and proactively meet market demands

Asset-intensive firms and industries face shrinking margins and more stringent capital spending requirements. They need a better way to plan, deliver, and transition assets – from construction to operations. Companies also need to manage their assets with greater efficiency, uptime, and effectiveness to extract higher returns. PwC helps clients across the lifecycle of capital projects and asset management – from projects, operations, maintenance, and supply chain through finance and tax. Traditionally, companies have gained these improvements:

- Increased return on assets
- Delivered CAPEX projects on time and on budget
- Provided better and faster start-ups
- Increased asset uptime and utilization
- Reduced costs and increase efficiencies
- Met increasing regulatory requirements

More Innovation, More Value, More Certainty

PwC + Oracle Supply Chain and Asset Lifecycle Management Solutions
