Trends and issues

What we are seeing in the market place

- **Standard operating models:** The speed of global supply chain expansion and outsourcing is out pacing IT development cycles
- **Visibility:** Real time visibility in to network wide working capital is still a challenge
- **Simplicity:** As supply chain networks become more complex, supply chain executives are looking for simply, yet agile, solutions
- **Risk management:** Organizations are looking to imbed a deeper level of risk management processes & systems into daily business operations
- **Tax effective supply chain design:** Many companies are taking a holistic approach to network design, tax, and organizational structures to gain efficiencies and cost reduction across the organization.

A glimpse into the future of supply chain technology

A PwC Perspective

Evolution in trading partner collaboration

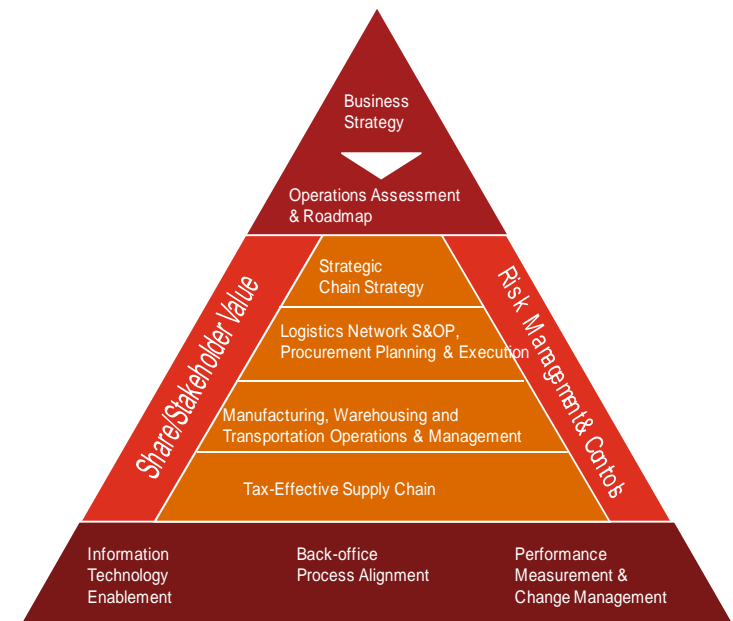

- Event based signaling
- Standards based
- Cloud based multi partner planning and execution applications

Holistic planning capabilities

- Working capital modeling
- Tightly Integrated SCP & TMS
