Alteryx Software as a Service by PwC*

Accelerate your data process automation with PwC and Alteryx SaaS

Although data process automations can save businesses hundreds of hours of work, provide them with better control of data, speed up results and spare them from errors, not all businesses are in the position to build technology-savvy teams and necessary infrastructure in-house in order to benefit from modern data transformation tools that help decrease manual data processing tasks to a minimum.

PwC Central and Eastern Europe and Alteryx, the global leader in analytics automation technology, have created a partnership to put at your fingertips the data you need, when you need it, without having to make significant investments and wait for months to start benefiting from it.

PwC can build tailored Alteryx solutions for you which you can run on internal PwC's infrastructure

Our service includes:

- Full development of Alteryx workflows / analytical apps according to client specifications

- Hosting Alteryx workflows / analytical apps, allowing clients to access and run them on PwC's environment

- Maintenance, support and adjustments of the solutions, if required

How Alteryx SaaS works:

pwc

```
Designing Alteryx workflows
        ↓
Granting access to workflows
   on PwC infrastructure
        ↓
```

Client user

```
Accessing the workflows when needed,
       as much as needed
        ↓
Uploading data and launching
       the workflows
        ↓
Downloading processed
       outputs
```

Maintenance and support

Key benefits of Alteryx SaaS for you

- No investment in licenses and IT infrastructure

- Fast implementation of automations by experienced PwC Alteryx developers

- No dependency on your in-house IT resources or infrastructure

- Self-service solution - you access and use automations when you need them
