

HAWKINS WRIGHT

Pulp Market Outlook

PricewaterhouseCoopers, Vancouver

May 8th 2008

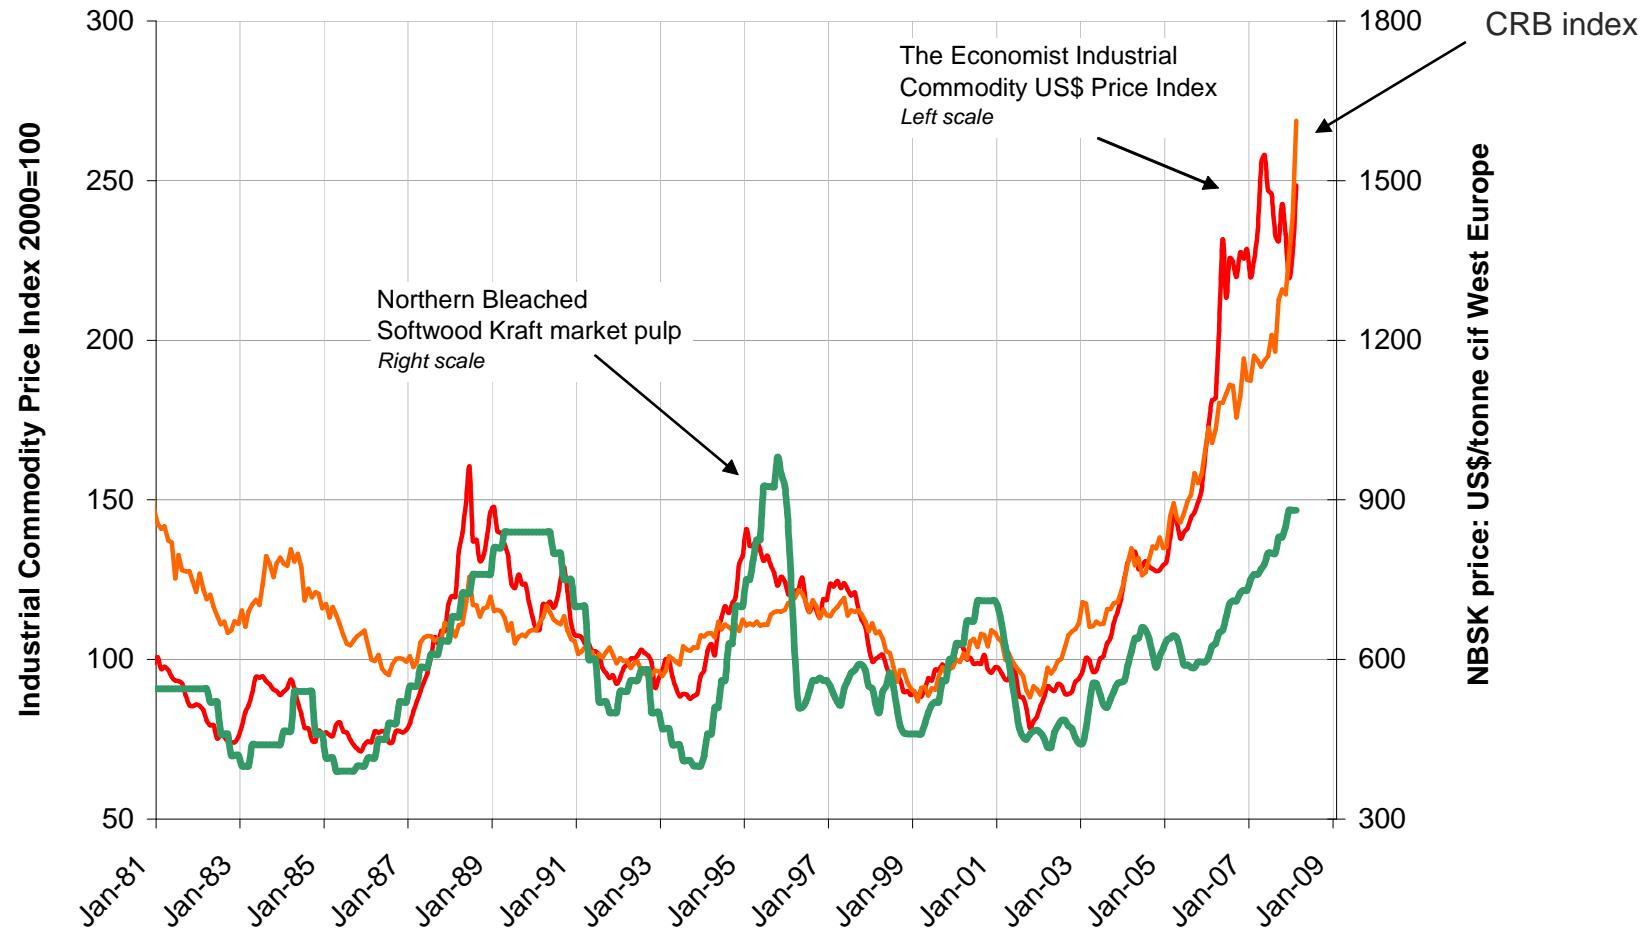

Pulp market themes

- Macro-economic influences
- Fibre availability
- Paper market restructure
- Supply & demand
 - > China
 - > Price differentials
 - > Substitution trends

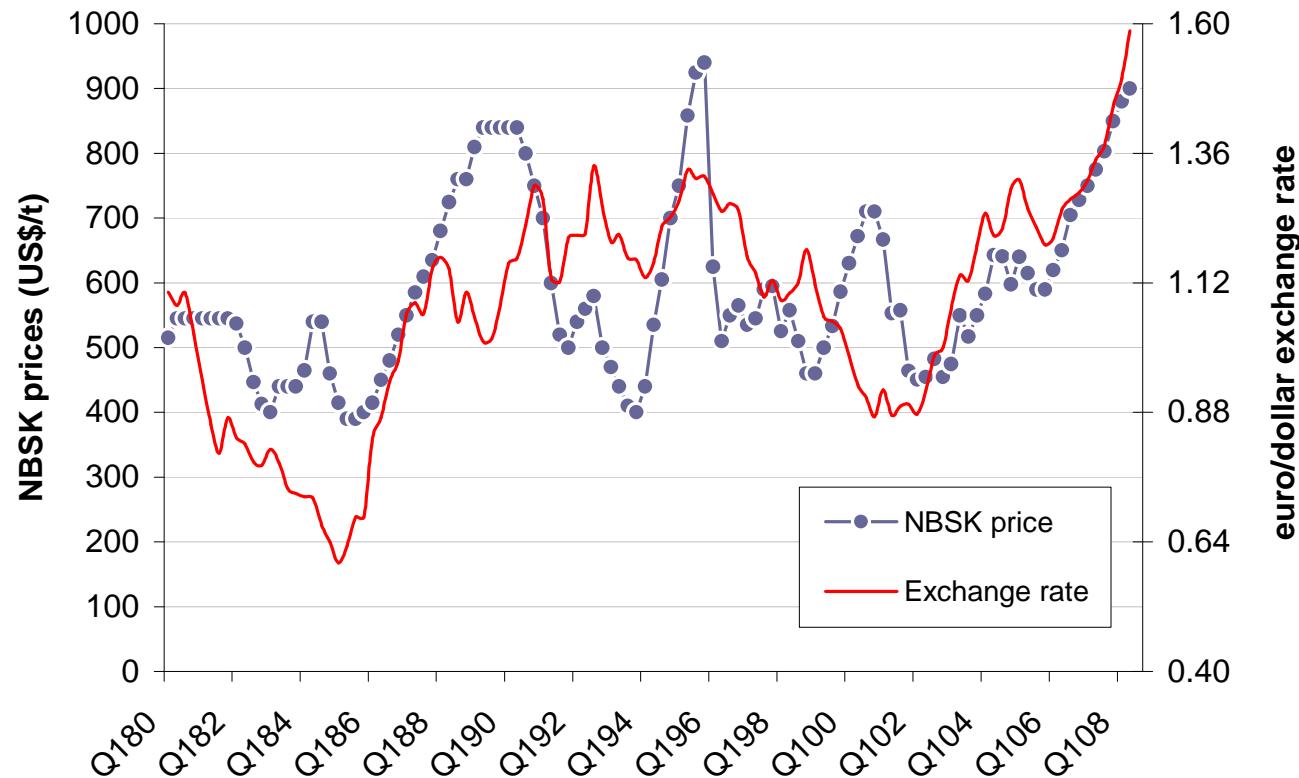

Pulp versus other commodities

Sources: *The Economist* (commodity price index); Hawkins Wright (pulp prices)

HAWKINS WRIGHT

NBSK v euro/dollar

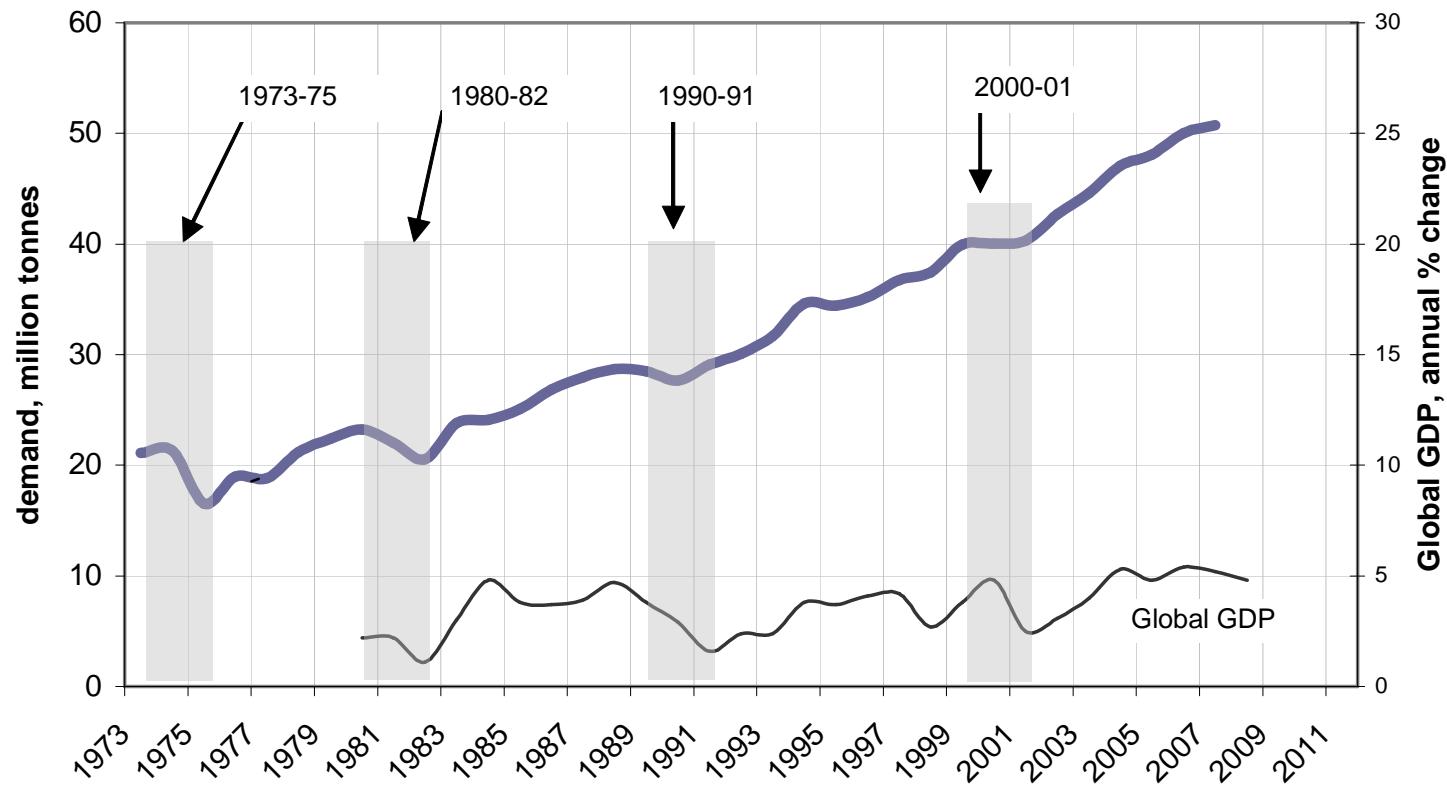

HAWKINS WRIGHT

Recessions

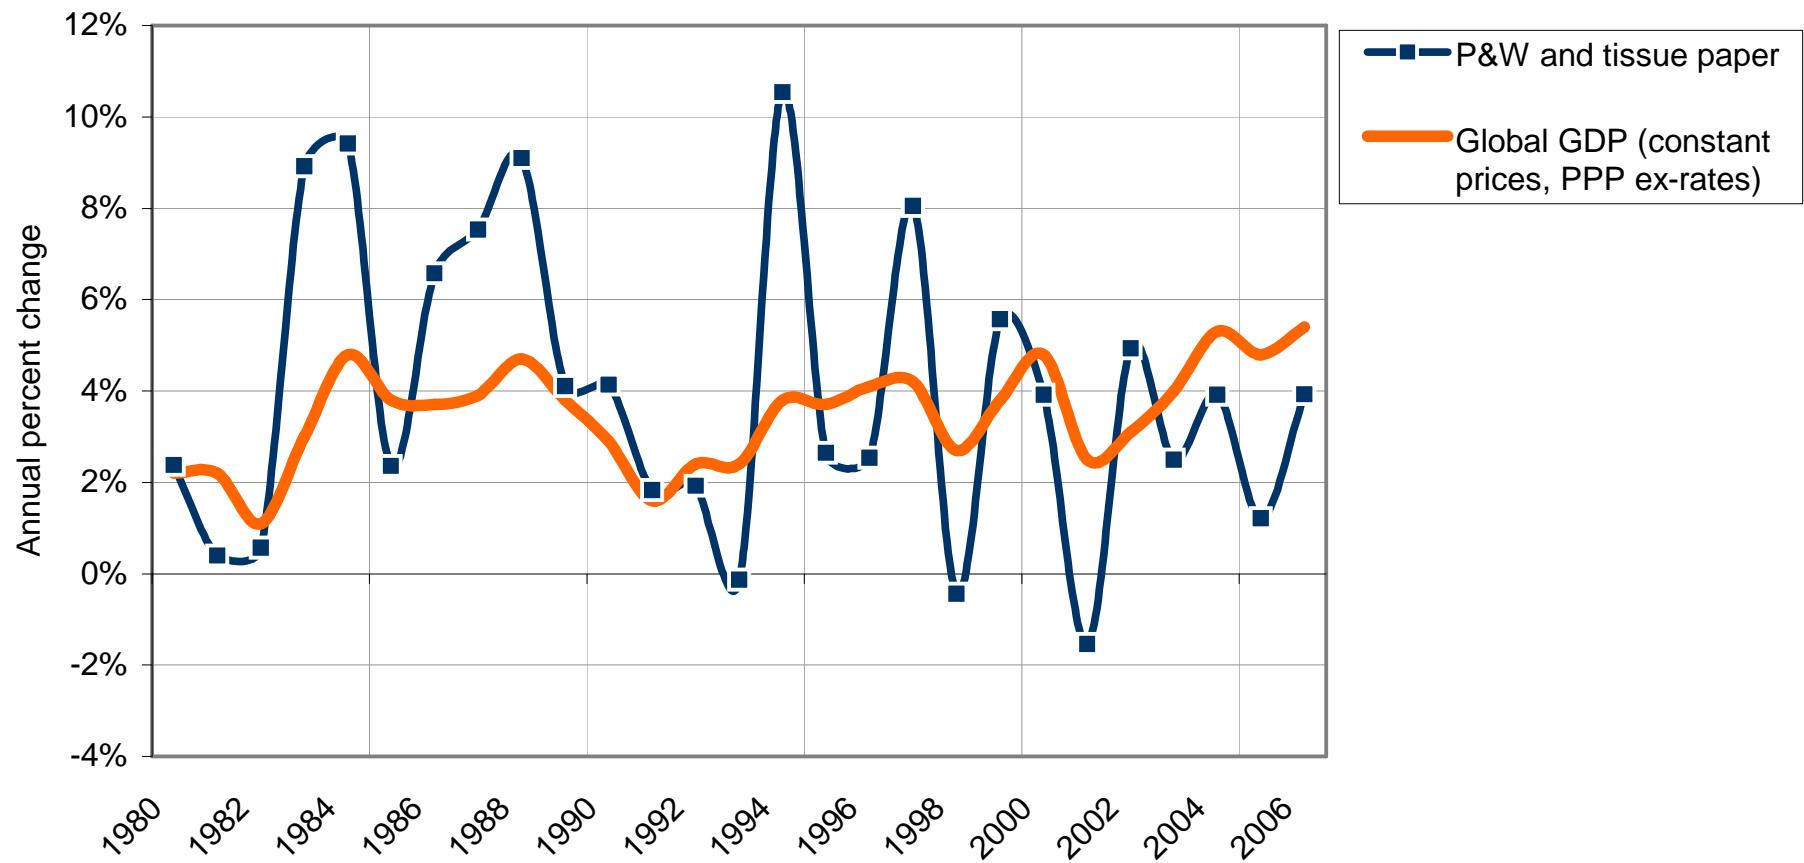

- Four recessions since 1973
- Affected both prices and volumes of market pulp and paper sales

Recessions and BCP demand

HAWKINS WRIGHT

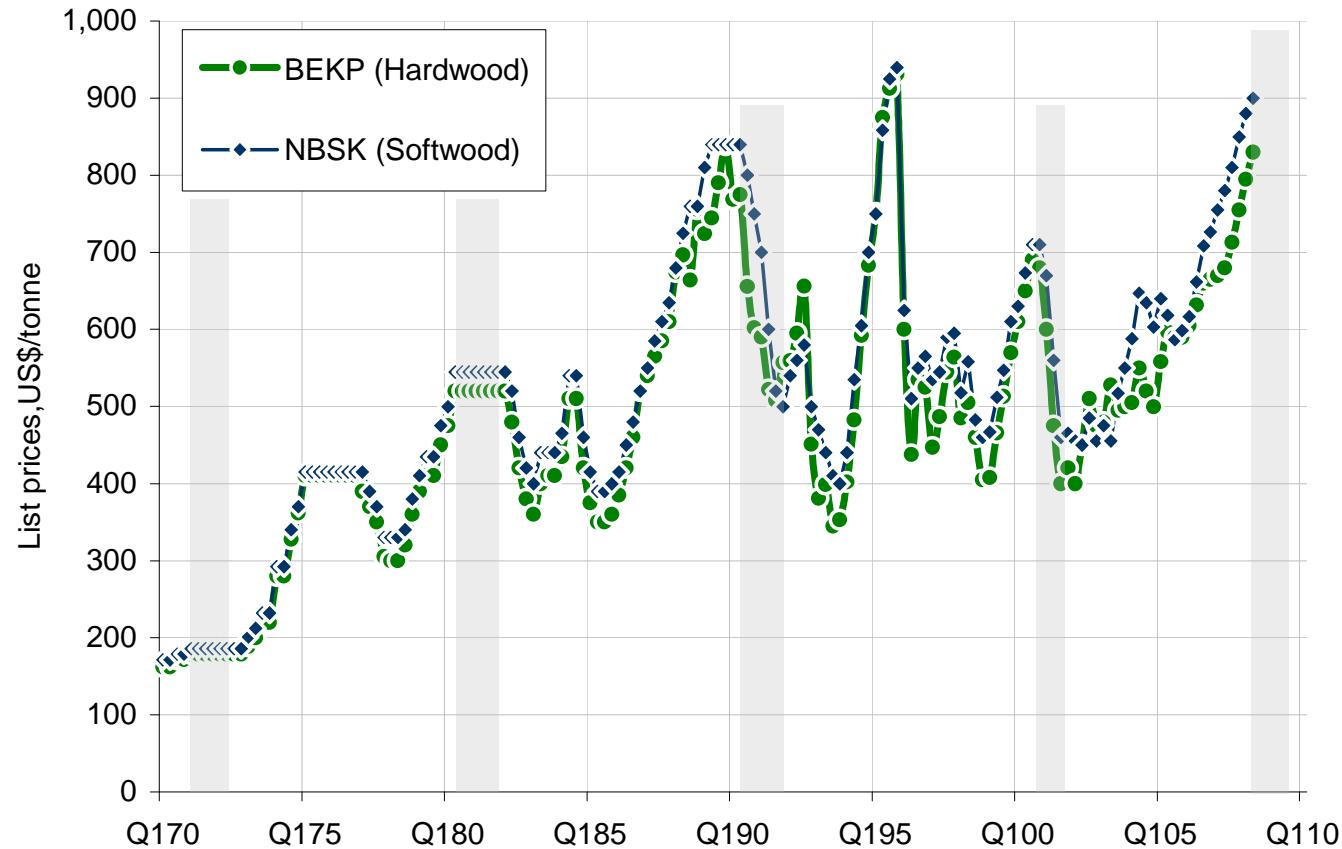

World P&W/tissue demand and global GDP

HAWKINS WRIGHT

Recessions & Prices (nominal)

HAWKINS WRIGHT

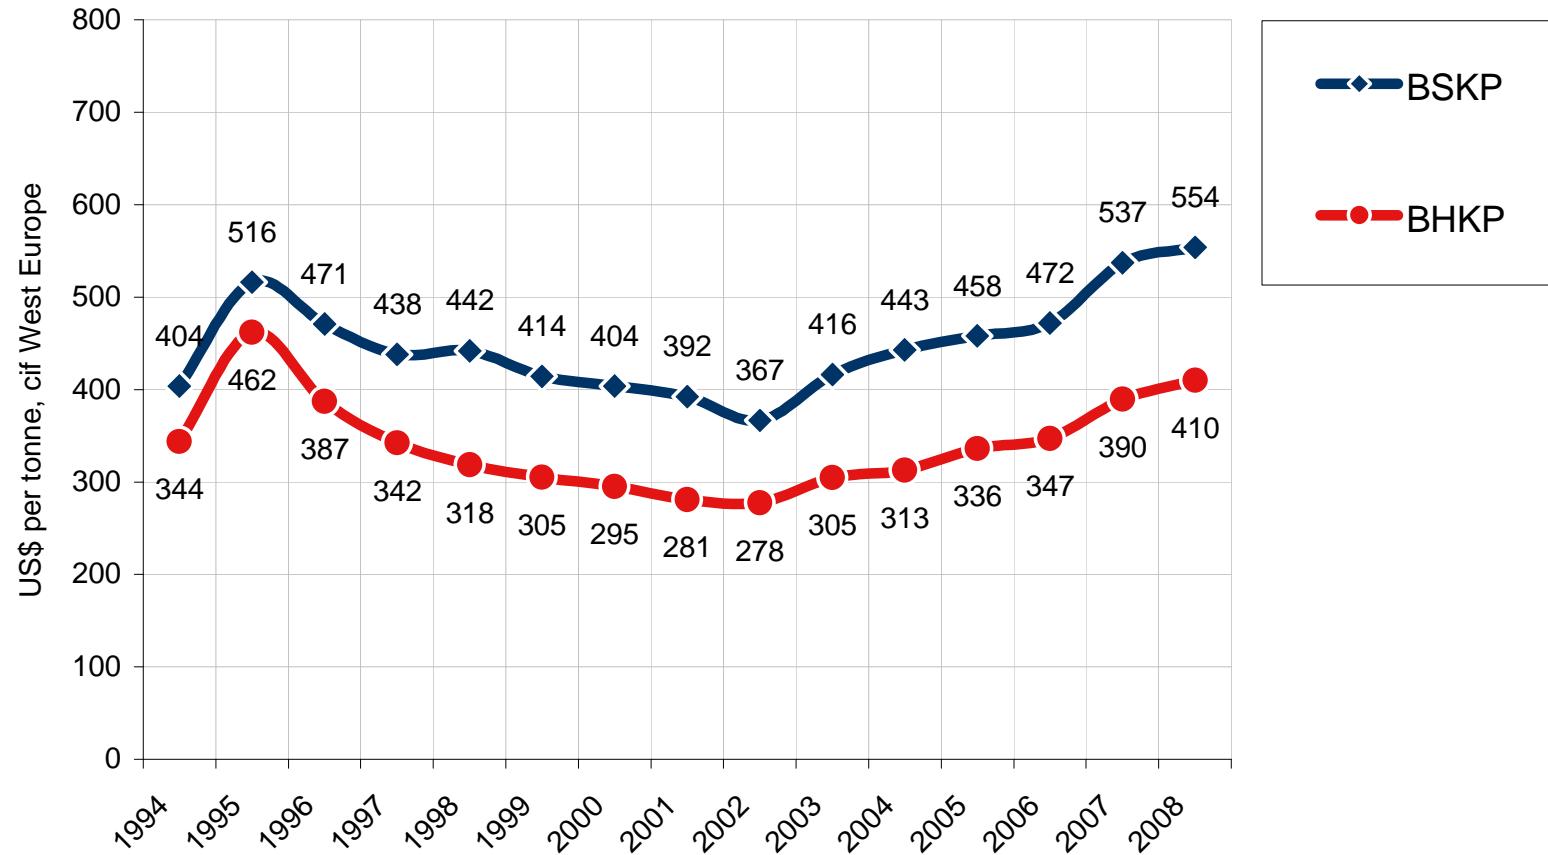

(2) Fibre constraints

- North America – lumber markets, (pine beetle, AAC, etc.)
- Europe – Weather, Russian export taxes, bio-energy competition
- Asia – illegal logging in Indonesia, lack of mature plantations in China
 - > China, Japan, Taiwan, Korea all fibre importers

Global Weighted average costs of production

HAWKINS WRIGHT

(3) Paper market restructuring

- Flat demand, rising costs, falling prices
- A recognition that this a trend, not part of a cycle
- Smaller non-integrated companies close
- Integrated companies are divesting non-core businesses, rationalising capacity
- 3.8 million t/y European P&W capacity (excl. newsprint & tissue) closes 2005-08
- 6.2 million t/y North American P&W capacity closes 2005-08
- More closures to come, limiting fibre consumption

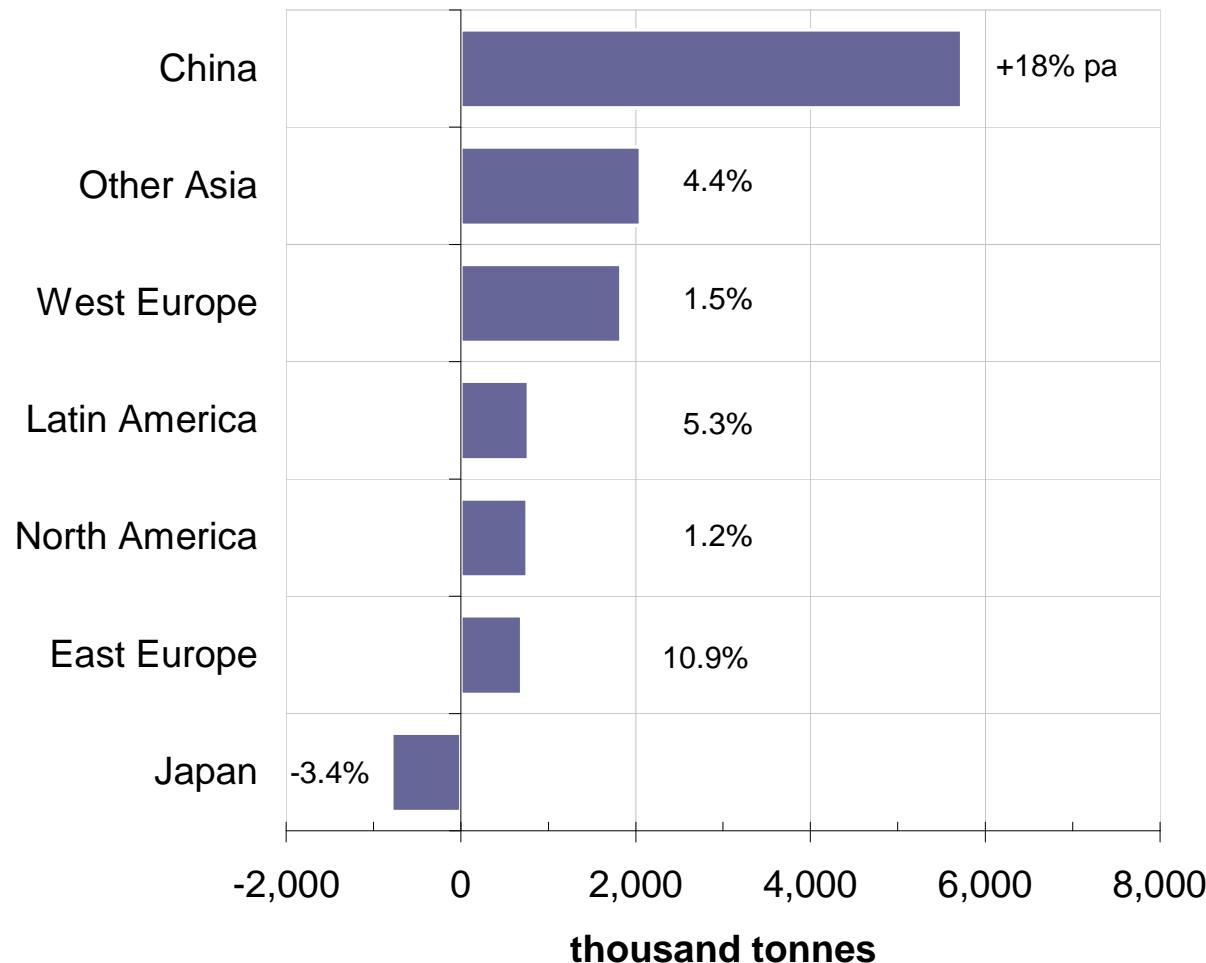

HAWKINS WRIGHT

(4) Supply & Demand for pulp

- Demand
- Supply
- Differentials and substitution trends

Global pulp* demand growth 2000-07

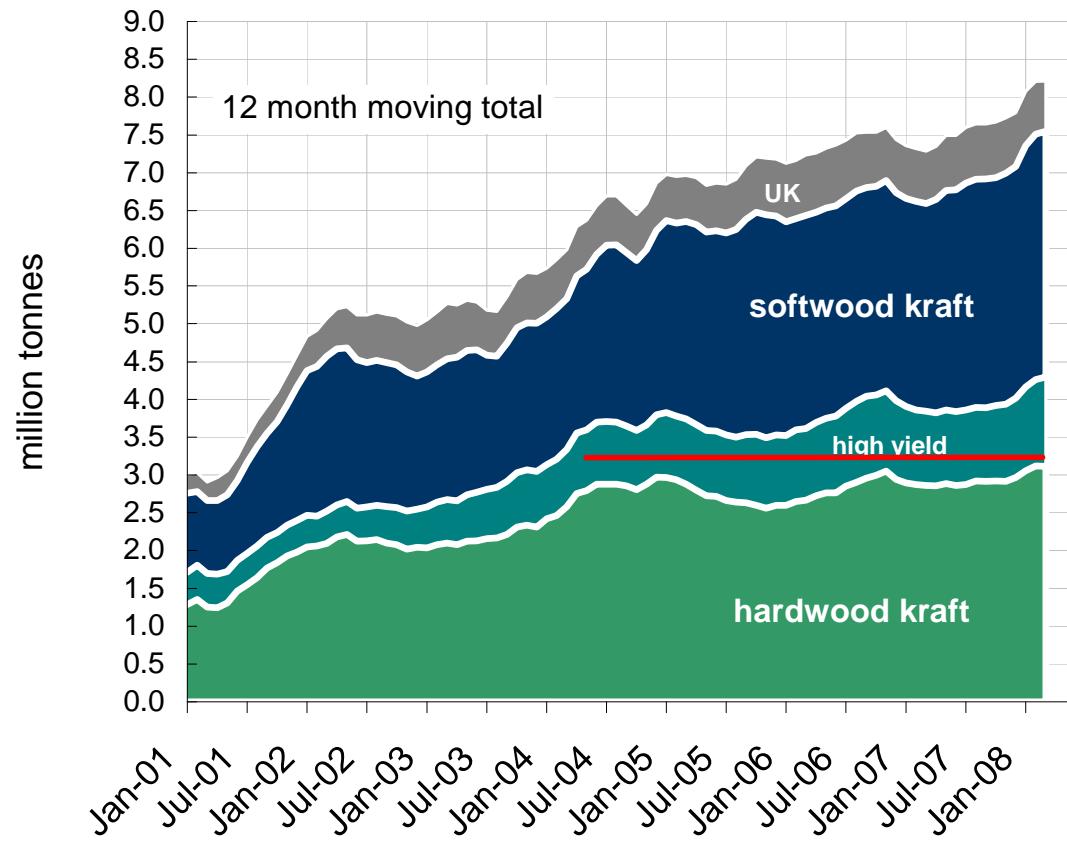

- Chinese demand includes 550,000t domestic BHKP production
- Korea, Taiwan, Thailand, Indonesia are mature or supplied domestically
- Most growth in Europe and North America is re-classification of affiliated shipments to market, or displacement of integrated pulp
 - > Real growth restricted to tissue and fluff

*Includes UKP & high-yield

Substitution

European price differential v softwood consumption growth

* Consumption data based upon 6-month moving average

Source: Hawkins Wright Research/Utipulp

HAWKINS WRIGHT

The short-term outlook...

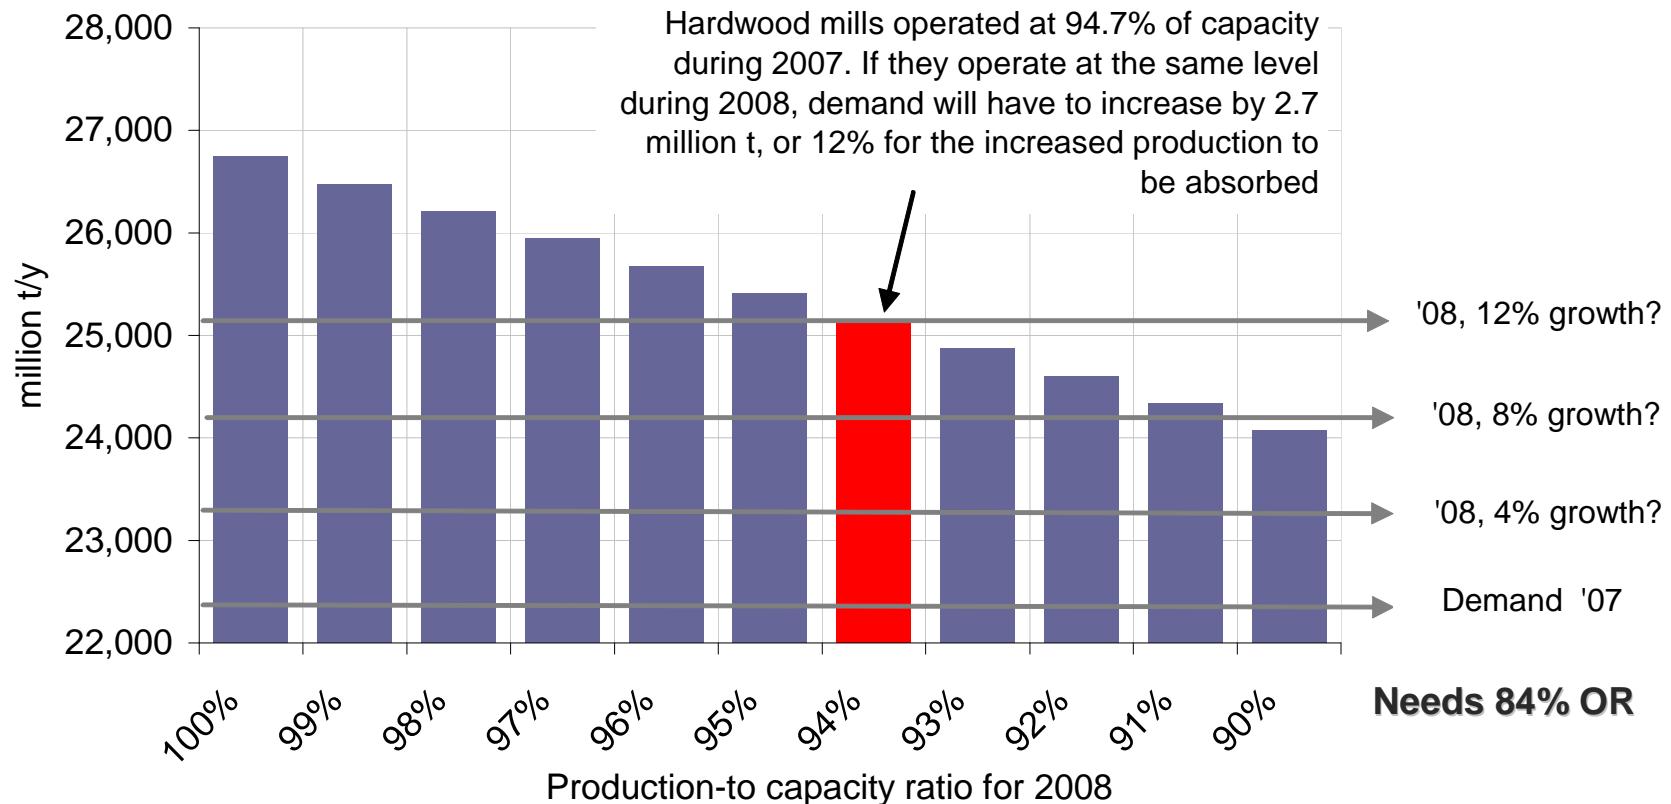

- Softwood v hardwood prices
 - > Wide variations in price differentials between Europe, USA and Asia are largely a function of discounts, freight rates and propensity for substitution
- Weakness in softwood likely to be short-lived
 - > Further closures and curtailments are on the horizon
 - > Stronger SW demand in Asia due to substitution
 - > P&T acquisition...??
- Hardwood remains solid but for how long?
 - > Inventories reached 36 days
 - > Indonesia...??

Scenario Analysis

Hardwood production/shipments, 2008

HAWKINS WRIGHT

Future considerations

- Unpredictables...
 - > The weather
 - > Exchange rates
 - > Mill closures, industrial action
 - > Trade legislation (Russia, China etc)
 - > Environmental legislation
 - > Freight bottlenecks – are they now the norm?
- However, based on what we know today, times will remain “challenging” and for most...
- “...winning strategy = survival strategy”
