

# Workforce Strategy Benchmarking Survey

Health Data Sheet

---

174 organisations

4 regions

13 countries

---

**We are living through a fundamental transformation in the way people work. Organisations need a strong workforce strategy today that helps them take action to prepare for tomorrow's world of work. We surveyed over 170 Health organisations to see how they stack up:**

## Stepping up to deliver a workforce strategy for the future

Overall, **12%** of global Health organisations are classified as 'leading' in their approach to workforce strategy. These businesses are prepared for the future across the four diagnostic components: planning; purpose; technology; and talent.

The maturity of Health organisations' workforce strategy varied across diagnostic components. Notably, **33%** of Health organisations are ranked as 'leading' in their strategic approach to **technology**, indicating they are making technology-related investments with human impacts in mind (e.g., employee experience and productivity). In comparison, only **11%** are ranked as 'leading' in their approach to aligning workforce strategy with their **corporate purpose and values**.

## The importance of planning – when linear predictions don't cut it

To plan for the future, organisations need to engage in integrated business, financial and workforce planning, bringing together the right stakeholders, data and mindset to engage in "scenario planning". Overall, **26%** of Health organisations said they 'always' take a scenarios approach to their strategic planning - with 32% 'never' or only 'sometimes' taking this approach.

**Question:** To what extent does your company engage in strategic scenario planning?

Source: PwC Workforce Strategy Benchmarking Diagnostic 2019

**Question:** To what extent does your organisation create future scenarios that consider the impact on your...? (percentage of those that responded 'always')

**Note:** This sheet reflects highlights and major trends for the four main components of the Workforce Strategy Diagnostic Survey. This does not reflect all questions within the diagnostic.

## Make decisions based on purpose and values

A coherent workforce strategy must align key decisions with the organisation’s purpose and values. Though Health organisations are making headway in aligning the management of headline-grabbing issues such as **diversity and inclusion**, **fair pay** and **hiring in the community** with their purpose, they aren’t faring nearly as well when it comes to thinking about **geopolitical risks**. Just **15%** say they ‘always’ consider the organisation’s purpose and values when making decisions in this area. Organisations are also less sure that they make decisions based on purpose and values when it comes to **head-count reduction** - **18%** say they ‘always’ align with purpose for this.

**Question:** To what extent does your organisation manage each of the following consistently, with your organisation’s purpose and values?

## Embrace technology as a force for good

Getting the technology component of workforce strategy right can be the difference between gaining competitive advantage in the market and falling behind. Decisions about technology need to be made with their impacts on the workforce clearly in mind, or they risk harming the employee experience, productivity and morale. More than **33%** of Health organisations report that they are ‘always’ effective in the ways they digitise productivity, connectivity and employee portal tools.

**Question:** To what extent does your organisation effectively digitise the employee experience by leveraging the following tools?

## Focus on talent, humans, and the humane

While several organisations consider the people impacts of robotic process automation (RPA) and artificial intelligence (AI) on their workforce and talent programmes, this is the least mature component of the four. The percentage of respondents answering ‘always’ suggests that Health organisations are thinking the most about RPA and AI impacts on **employee engagement (28%)** and **re-skilling employees (26%)**, and the least about **head-count reduction (21%)**.

**Question:** To what extent does your organisation consider the people impacts of RPA/AI on the following? (Percentage of those that responded ‘always’)

**Question:** To what extent does your organisation evolve or redesign talent programmes to meet changes in market or workforce needs? (Percentage of those that responded ‘always’)

## How do Health organisations compare to those in other industries?

Health organisations fall in the middle of the pack when compared to other industries, suggesting some preparations for future work and workforce needs have been made, but there is room to grow. **12%** of Health organisations are considered 'leading' in their preparedness for future workforce needs; in comparison, **16%** of Technology, Media, and Telecommunications organisations fell into this category, while only **7%** of Consumer respondents did so.

### About the Survey

The purpose of this diagnostic is to allow organisations to assess their workforce strategy maturity across four distinct areas: planning, purpose, technology, and talent. As of January 2019, the diagnostic has been taken by 1243 leaders in 36 countries across 12 industries.
