# ***The PwC Israel 2012 Hi-Tech Exit Report***

## ***\$5.5B Israeli hi-tech exits in 2012***

Rubi Suliman,  
Partner,  
High-Tech Leader,  
PwC Israel

Surprisingly enough, there is still no Hebrew equivalent for the term exit, especially given it's been increasingly used here. Data show that 2012 was a record year for exits of Israeli companies, with \$5.5 billion in 50 transactions and an average deal size of \$111 million. This, we might add, excludes NDS that was sold to Cisco for \$5 billion, because it is not considered an Israeli exit. We also don't count in the Object/Startasys deal, which we don't see as really an exit.

### ***On exits and growing multinational corporations***

A heated debate is now raging on the issue of Israeli startup exits vs. building large Israeli corporations. To contribute to this debate, I would like to present a somewhat different perspective. Exits are a blessing for Israel, both in terms of immediate tax collection, but even more so in creating jobs, bringing in more investors, and enriching management and technology experience in Israel, to name just a few benefits.

And, the truth of the matter is that most exiting startups would not have become global tech giants anyway, and some were even formed in the first place with a clear vision of an exit. This narrows down the discussion to those few companies that could potentially evolve into leading multinationals that employ hundreds and thousands of people. For any of those selected companies, market forces should tip the balance between exit and no exit. The bid price, entrepreneurs and investor preferences, the buyer, the business, market conditions, the power of proprietary technology and tax rates are some of the major factors that would direct a company that way or the other. The government can (and should, if that is in its best economic interests) to put on the table the right incentives for investors to go public rather than exit, like providing benefits for such companies. But entrepreneurs and investors have some other powerful considerations in mind.

But beyond that, our take is that, ***paradoxically, current exits help create future Israeli multinationals.*** Growing such a multinational is a complex task that requires the right product and technology, an experienced management team and supportive investors. Building a large corporation can bring much more value than a quick exit, but carries much bigger risks. Even though ***any large, successful company can go for an exit, not every exiting company can become a large, successful company.***

One product of exits is investors and entrepreneurs that are more patient, with bigger money and richer multinational experience. The presence of those very essential building blocks of major multinationals makes it easier to take the harder decision not to have a quick exit, but grow. We are already seeing some mature Israeli companies that are now weighing between an IPO and an exit, or some that have advanced even farther and are now looking for the right timing to go public.

The Israeli tech multinationals are growing before our eyes. There is no doubt that most companies will likely choose an exit, but few will grow to become the multinationals that we have wished to see for so long.

### ***Exits only***

In 2012, the exit market was mainly driven by a high average price per deal. The trend for some years now is clear: less transactions but for higher prices. This trend indicates that the Israeli hi-tech market has now come of age, and that individual local companies get to the exit line when they are much more mature. The last two years volumes tell about the robustness of Israeli hi-tech, which even in a time like this of global economic uncertainty still attracts buyers and prospects from across the world.

Sliced by segment, the figures really speak for themselves. But note that one or two large deals can skew perceptions about relative strength of

sectors. Notably, the internet sector has gone significantly down from its 2011 exit level, but that doesn't mean it is becoming weaker, and it is very likely to continue to be a powerhouse for Israeli hi-tech growth for years to come. The semiconductors sector is also somewhat slower, but is far from going away, which is another testament for the strength of the industry. IT and enterprise software was ahead of all other sectors thanks to the three large transactions this year.

### ***What the future holds***

2013 started with much optimism. Two straight years with high exit levels brought here many investors and buyers. Most global hi-tech giants have development centers in Israel, and those also serve as bridgeheads to scout for the next hot Israeli company to buy. Many international private equities slowly join in, as the Israeli hi-tech landscape remained as diversified and innovative as ever. Many of the Israeli companies are quite advanced on the maturity continuum, which can eventually be reflected by exits worth over \$1B. The new year is already poised to surpass the ones that came before it. Not only this, a potentially vibrant US market for tech IPOs in 2013 makes it possible that we will see a handful of interesting IPOs of Israeli companies and a continued building up of those long awaited Israeli multinationals.

Happy and successful exit year  
Rubi Suliman, Partner
