What's New in Release 2502

What's New in **Release 2502**

As previously indicated, one of the **key benefits** of adopting SAP S/4HANA Public Cloud is the ability to leverage SAP's semi-annual innovation releases in February and August.

In **February**, SAP released the **new release 2502**, which introduced several key innovations. Let's explore these together.

Finance & Controlling

- The new "**SAP Green Ledger**" solution plays a pivotal role in carbon accounting by serving as its central hub.
- The "**Direct Integration of SAP Advanced Financial Closing with SAP Build Process Automation**" allows users to develop detailed workflows to execute specific steps, incorporating conditions, events, and additional elements.

Sales

- As of release, users can now have support make-to-order processing and variant configuration with advanced intercompany sales processing, via the "**Advanced Intercompany Sales: Basic Make-to-Order Process with Variant Configuration**" app;
- The **Creating Debit Memo Requests through Spreadsheet Upload** enables users to generate real-time debit note requests by uploading spreadsheets with the necessary data, leveraging the SAP Fiori "Import Debit Note Requests";
- Enhancement of the "**Managing Price Agreements in Sales Contracts**" app, managing price agreements for the sold-to party has become a streamlined process..

If you would like to have a closer look and to discuss together the news released for the **other areas** (e.g. Purchasing, Production, Supply Chain, etc.) please contact us by **filling in this [form](#)**!

What's New in **Release 2502**

SAP Green Ledger capabilities

- Support for integration with other systems and replication of corporate financial master data;
- Import of material movements from financial accounting and enrichment with carbon quantities;
- Import of emissions from SAP Sustainability Footprint Management and posting as journal entries;
- Capture and posting of carbon data and export of carbon data for corporate reporting;
- Allocation management and visualization and reporting of carbon data only or in comparison with financial data.

Direct Integration of SAP Advanced Financial Closing with SAP Build Process Automation” capabilities

- Integration of workflows into the financial close in SAP Advanced Financial Closing;
- Leverage all workflow capabilities, such as integrating bots into workflows.;
- Automatic triggering of workflows based on SAP Advanced Financial Closing scheduling capabilities;
- Custom variables from SAP Build Process Automation can be mapped to parameters in SAP Advanced Financial Closing;
- Workflows can return a business status that can be mapped to an accurate task status in SAP Advanced Financial Closing.
