

# Test Data Refresh for the Parallel Line

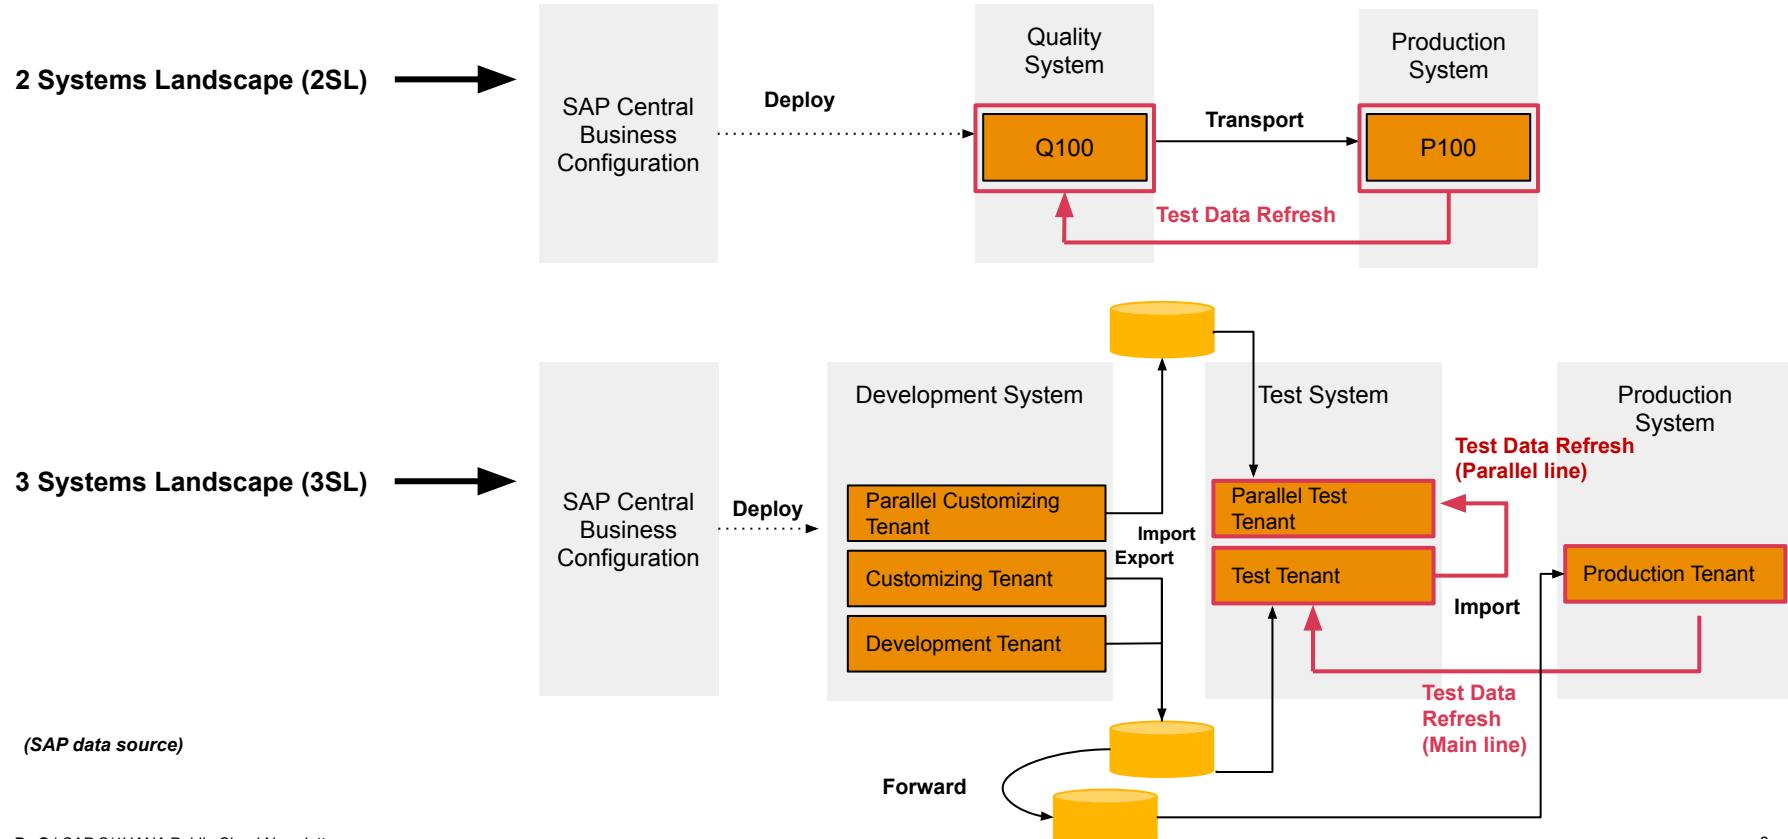

# Test Data Refresh for the parallel line

The purpose of the SAP S/4HANA Cloud Public Edition Test Data Refresh is to update **Quality system** with **master and transactional data** from your production system. If required, customers can also depersonalise personal data in order to support compliance with data protection and privacy regulations.

Information	Type of service
<ul style="list-style-type: none"><li>The service is currently only available for SAP S/4HANA Cloud Public Edition.</li><li>Customers can run numerous refreshes, subject to the availability outlined in a calendar. The service can be requested at any time (except during upgrade period) but it cannot be provided immediately. It is recommended to request it four weeks in advance.</li><li>The depersonalization feature is available to support data protection and privacy compliance. This feature is optional and can be deactivated during the service delivery process.</li></ul>	<ul style="list-style-type: none"><li>Master and transaction data in target system will be refreshed from the source system.</li><li>Business and technical configuration is not in scope of the refresh.</li><li>Available for 2-System Landscape (2SL).</li><li>Early Adopter for 3-System Landscape (3SL), main line.</li><li>New Early Adopter for 3-System Landscape, parallel line.</li></ul>
