ASEAN-6 eReadiness 2025

Survey report

November 2025

This report is an excerpt about ASEAN-6 from the 6th edition of our global eReadiness Study 2025

About the global study

ASEAN-6 key market takeaways

ASEAN-6 TIV growth of LV primarily in xEV, where Chinese OEMs lead the charge

- **ASEAN-6 overall LV sales appear to be stabilising with a 1.5% decline in TIV as of 3Q25:** significant xEV growth with a slowdown in ICE vehicles across most markets
- **Dynamic shift: Chinese and local EV OEM newcomers gaining ground,** challenging conventional dominance of Japanese, Korean and Continental OEMs

EV ownership in the region nascent but primed for growth

- **Overall ASEAN-6 ownership relatively nascent** (c.11% of study sample own an EV); SG and VN clearly lead the region in ownership, while MY is the most EV-sceptical
- **Primed for growth, with prospects high:** majority of respondents in ASEAN-6 plan to buy an EV in 5 years (c.76% of sample), a resounding sentiment across all markets
- **EV sceptics remain, but may ease:** increasing EV affordability and improving EV infrastructure may increase acceptability among lower-income and suburban (non-city-centre) sceptics

Regional eReadiness at halfway point; further infrastructure and supply needed

- **ASEAN-6 is at “middle of the road” for eReadiness** versus other regions, but notable outliers exist: SG is leading in eReadiness globally (second only to Norway), while the Philippines lags behind
- **EV demand and government incentives score well** (> 2.5 score), but Infrastructure and supply remain to be areas of improvement for most ASEAN-6 markets (< 2.5 score), excluding SG

ASEAN-6 consumer characteristics

ASEAN-6 consumer survey,
% of respondents (n = 3,822)

- 1 EV owners are mostly satisfied with purchase, but ICE reversion still possible**
 - **Most owners satisfied with their current EV purchase** (c.90%), particularly with charging time, battery range and lower-than-expected operating costs (costs during use, e.g. refuelling); dissatisfaction mostly stems from a lack of charging infrastructure and locations, and pricing tariffs
 - However, **a notable proportion of EV owners would still consider reverting to ICE** (c.37%) for their next purchase, citing higher-than-expected maintenance cost and driving experience—an opinion most strongly observed in ID and VN
- 2 EV prospects' adoption intent is overall low, with cost of ownership appearing to be the “make-or-break” decision factor; prospects more prominent among the affluent/passionate personas**
 - **Overall prospect appears low:** fewer than 35% of all personas intend on EV purchase
 - **EV prospects higher among the affluent and/or passionate personas:** the ‘Luxurious’, ‘Tech Enthusiast’ and ‘Dreamer’ groups are most keen on EV purchase (c.30% of them intend to purchase an EV in the near future)
 - **Conventional mainstream prospects lower:** only c.20% of ‘Mainstream’ & ‘Frugal’ personas intend to buy an EV in near future
 - **ASEAN-6 is the most concerned with ownership cost:** the biggest group in the sample (c.15%) expects to pay < USD 11K for an EV, the highest proportion among all regions; fuel economy is the top decision factor for ASEAN-6 respondents (mentioned by c.62% of sample)
- 3 EV sceptics' primary reasons for rejection revolve around inconvenience of usage**
 - Recharging time, uncertain battery lifetime and limited range are top 3 reasons for EV rejection
 - However, the top reason (among these 3) varies significantly across each ASEAN-6 market

YTD-3Q 2025 TIV (LV) in ASEAN-6 stabilised and dropped only slightly at 1.5% amid slowdown in ID, MY and TH markets

ASEAN-6 Total Industry Volume ("TIV")*

('000 units sold, YTD-3Q 2023 vs 3Q 2024 vs 3Q 2025)

Growth % compares YTD-3Q 2025 vs 3Q 2024

■ YTD-3Q 2023 ■ YTD-3Q 2024 ■ YTD-3Q 2025

Note: (1) Total Industry Volume = No. of units sold inclusive of Passenger Vehicles (PV) and Commercial Vehicles (CV), together Light Vehicles

Indonesia

-11% contraction in sales

Higher Luxury Sales Tax, lower government spending, and a weaker rupiah reduced purchasing power, prompting consumers to delay buying amid slower economic growth and some social unrest

Philippines

2% growth in sales

Stable economic growth, low inflation and continued interest rate cuts in 1H2025 have improved consumer confidence towards purchasing vehicles, slight slowdown in 3Q with some decline in sales

Malaysia

-2% contraction in sales

Normalisation due to shrinking order backlogs, following the record-high TIV in 2024 (817k): strong economy is supporting the automotive market; PV stronger than CV

Vietnam

18% growth in sales

Growth supported by introduction of more affordable EV models, registration fees exemptions, interest rate cuts, and ongoing economic strength; growth will continue perhaps at slower pace

Thailand

-4% contraction in sales

Stricter bank loan approvals led to lower ICE vehicle sales, but BEV/PHEV sales growing driven by price cuts, purchase subsidies and excise tax cuts; turn around possible in 2H25

Singapore

25% growth in sales

Growth on the back of additional COEs being added across vehicle categories over the next few years from 2025

Dynamic shifts in ASEAN-6 total Light Vehicle market, with Chinese OEMs rapidly gaining market share at the expense of Japanese brands

Top 15 automotive brands in ASEAN-6

YTD-3Q 2023 vs 3Q 2024 vs 3Q 2025 sales volumes by brands

OEM market share in ASEAN-6 by origin

YTD-3Q 2023 vs 3Q 2024 vs 3Q 2025

YTD-3Q 2025 showed strong growth for xEV of 62% across all markets leading to an average xEV adoption of 17% in ASEAN-6

xEV Sales Volume

'000 units sold, YTD-3Q 2023 vs 3Q 2024 vs 3Q 2025

Growth % compares 3Q 2025 vs 3Q 2024

Indonesia

- 100% luxury sales tax (PPnBM) exemption for the import and sale of EVs throughout 2025
- Aims to build fully integrated EV battery ecosystem by 2027-2028, backed by major investments, targeting 600k EVs by 2030

Malaysia

- EV demand continues to grow on a small scale
- MY automotive policy targets for EVs to make up 20% of the total industry volume by 2030 and 80% by 2050

Thailand

- EV 3.5 scheme offers tax cuts and up to USD 2,700 subsidies, pushing BEV adoption
- Targets to have 30% of its annual vehicle production to EVs by 2030, which equates to 725k EV cars and 675k electric motorcycles

Philippines

- Zero tariff rate and import duties exemptions for EVs until 2028
- Forecasted that the number of EVs will increase to 6.6 million by 2030, out of which 5% are electric cars

Vietnam

- 100% registration fee exemption for EVs through February 2027
- Combined EVs sales (2W & 4W) are projected to grow from under 1 million in 2024 to over 2.5 million by 2036 (+8% CAGR)

Singapore

- 45% Additional Registration Fee (ARF) rebate for EVs extended through 2025
- Targets for 60k EV charging points by 2030 and a fully electric bus fleet by 2040

In the growing segment of xEV, Chinese brands and Vinfast have already overtaken traditional brands from Japan, US, Europe, and Korea

Top 15 xEV automotive brands in ASEAN-6

Section

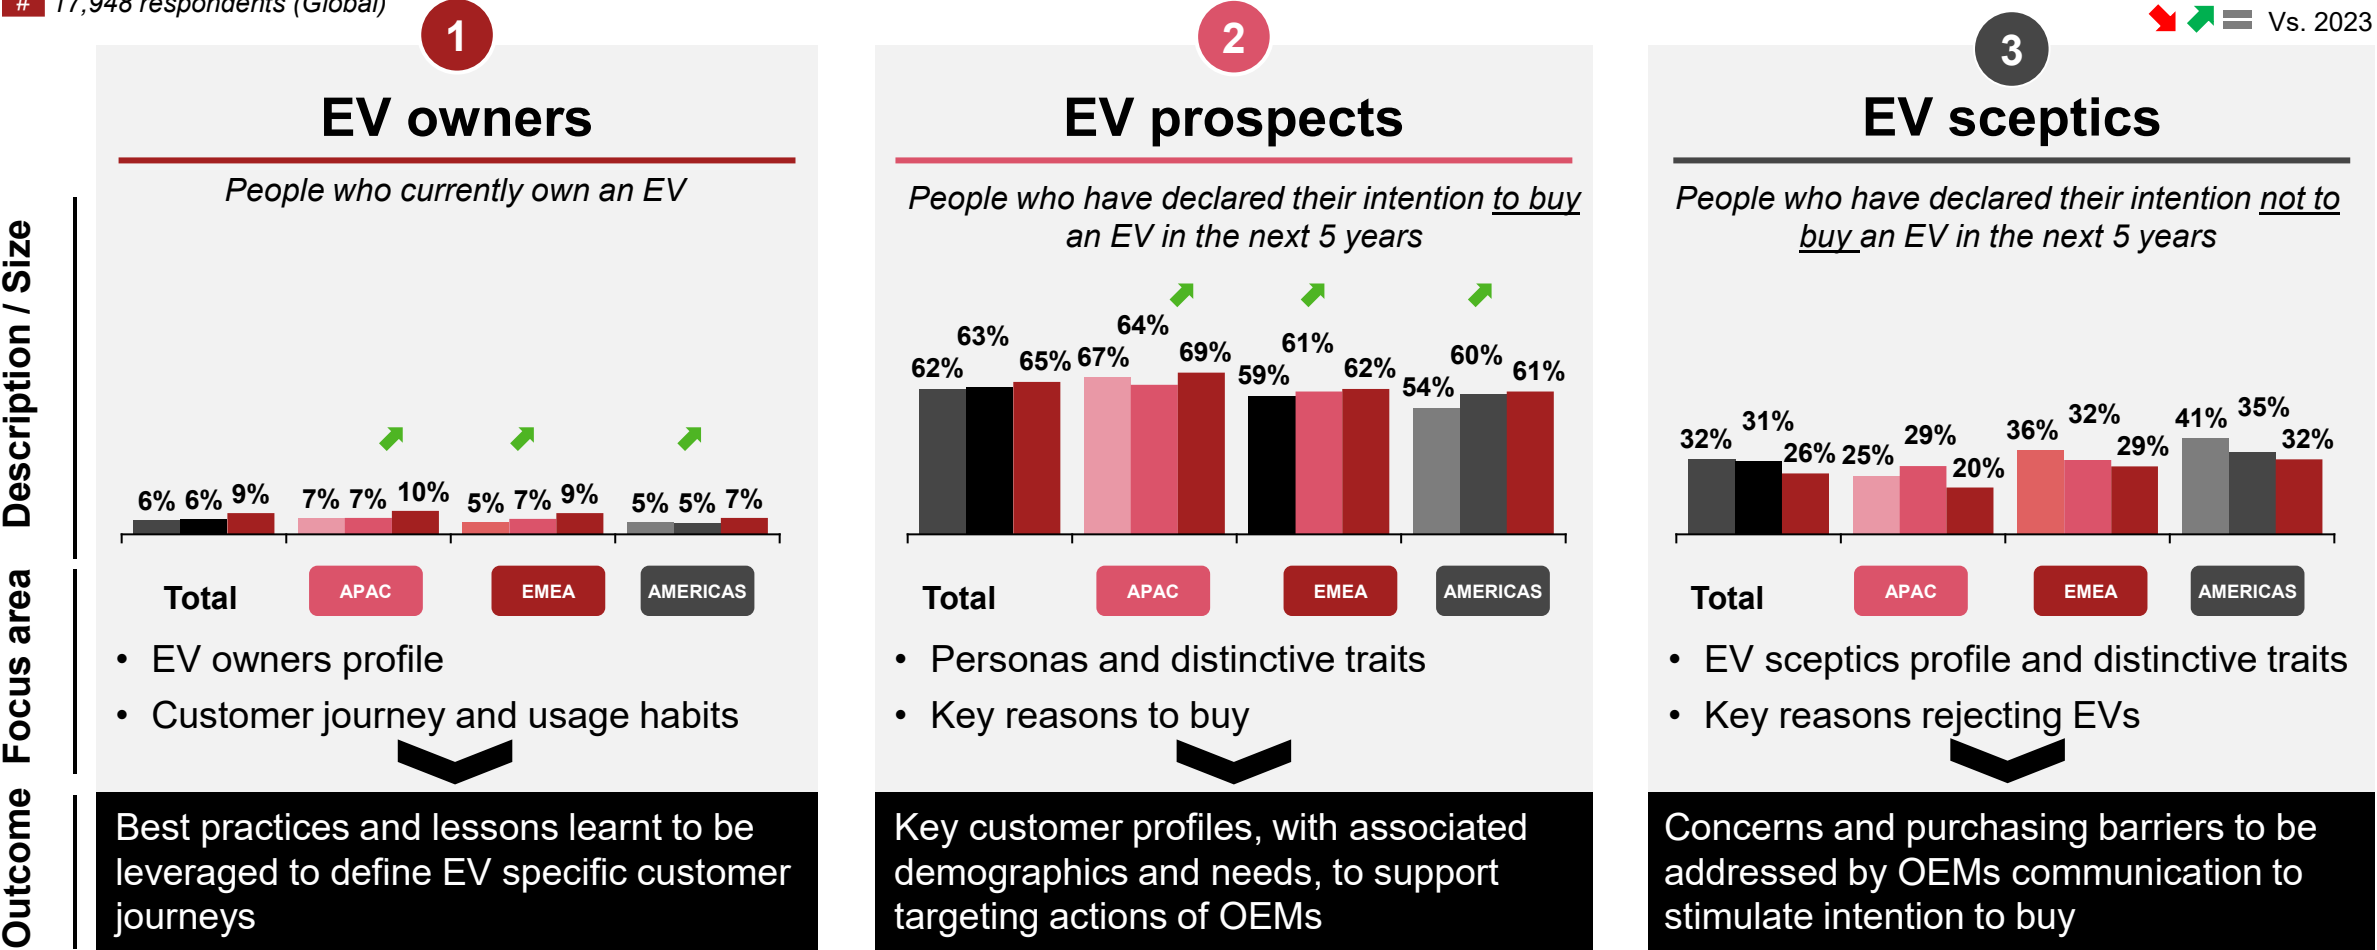

1. ASEAN-6 Market Snapshot
- 2. Consumers Viewpoint**
3. eReadiness Index
4. Contacts

Consumers have been grouped into 3 main clusters within 3 regions: EV owners, EV prospects, and EV sceptics; ASEAN-6 is part of APAC

Consumer survey – Clusters and investigation areas

17,948 respondents (Global)

The consumer groups vary significantly in ASEAN-6. VN and SG have the most EV owners while MY has the most EV sceptics

Consumer survey – Clusters and investigation areas

3,822 respondents (ASEAN-6)

EV owners, prospects, and sceptics in ASEAN-6 exhibit distinct characteristics in terms of income, mobility requirements, and demographic profiles

Consumer survey – Cluster profiles (1/2)

17,948 respondents (Global)

3,822 respondents (ASEAN-6)

 **What is your annual gross income?¹**

 **What is your age?**

 **Where do you live?**

 **Do you have a private parking spot at home?**

Norway and China have the highest share of EV owners, with Singapore, Vietnam and Indonesia following. Malaysia and the Philippines are among the lowest EV owners, though not the most sceptical globally

Consumer survey – Cluster profiles (2/2)

2. Consumer Viewpoints

1. EV owners

Consumers that already own an Electric Vehicle, either plug-in hybrid or fully electric

Dealerships remain the primary source for buying EVs, but online platforms companies are also relevant, especially in PH, ID, and TH

Purchase method

Where did you buy it?

1 EV owners

52% of EV owners would purchase their next car online, especially in Malaysia

Online purchase intention

What are the main reasons to buy an EV online?

671 respondents – Multiple choice (APAC) # 408 respondents – Multiple choice (ASEAN-6)

1 EV owners

EV owners' satisfaction with their current EV is high and mainly driven by the recharging duration, lower costs, and battery lifetime

Customer satisfaction – Focus on product

How satisfied are you with your current EV?

1,554 respondents (Global) # 423 respondents (ASEAN-6)
■ Dissatisfied ■ Neither satisfied nor dissatisfied ■ Satisfied

What are the main reasons of your satisfaction?

1,408 respondents (Global) # 369 respondents (ASEAN-6)
■ ASEAN-6 ■ APAC ■ Americas ■ EMEA

1 EV owners

EV Owners’ satisfaction is generally high across all countries, except for Japan. ASEAN-6 is within average, except for Thailand

Customer satisfaction – Focus on product

How satisfied are you with your current EV?

1 EV owners

However, 39% of EV owners in ASEAN-6 would still consider reverting to ICEs due to unexpected costs and driving experience

Customer satisfaction – Focus on product

Would you switch back to ICE?

Focus on next slide

What are the main reason to switch back to ICE?

1 EV owners

In ASEAN-6, Thailand and Vietnam show above global average (34%) share of EV owners who would consider switching back to ICE

Customer satisfaction – Focus on product

Would you switch back to ICE?

Indonesia, Vietnam, and Thailand lead in EV reversion due to high maintenance costs

Customer satisfaction – Focus on product

What are the main reasons to switch back to ICE?

1 EV owners

Countries with the highest BEV penetration typically see 75–80% of EV owners unwilling to return to ICE vehicles

Customer satisfaction – Focus on product

Would you switch back to ICE?

When purchasing a private charging infrastructure, the primary considerations are price, charging speed, and reliability

Charging solution

What are the key driving factors when buying the charging infrastructure?

The majority of EV owners tend to charge their vehicles two to three times a week, primarily utilising grey energy

Charging preferences

How often do you charge your EV?

Which energy source do you use at home?

1 EV owners

EV owners charge their vehicle primarily at home or at their working location, with significant differences in ASEAN-6

Charging preferences – ASEAN-6

Which is the primary location where you charge your EV?

408 respondents (ASEAN-6)

At home At my office On the street At shopping malls / others

1 EV owners

Fast charging solutions remains the preferred choice in ASEAN-6 while subscription plan are in decline

Public charging – ASEAN-6

Which charging power do you typically use?

295 respondents

- Slow charge (< 7 kW)
- Quick charge (7 - 22kW)
- Fast charge (22 - 50 kW)
- Ultrafast charge (> 50kW)
- I use what is available

Which tariff do you use?

295 respondents

Do you always use the same charging provider on-the-go?

815 respondents

No Yes

Which are the top 3 reasons to choose the same provider?

546 respondents

Which are the top 3 reasons to use different providers?

269 respondents

1 EV owners

Availability of charging infrastructure, location, and tariffs are the key dissatisfaction area for EV owners in ASEAN-6

Public charging – ASEAN-6

408 respondents (ASEAN-6) – Multiple choice

1 EV owners

Malaysia and Singapore are among the countries with the highest propension towards used EVs. Other ASEAN countries rather low

Used EV

Would you buy a used EV as your next car? (% of yes)

1 EV owners

Physical stores are the preferred purchasing channel for used EVs, whether from official dealers, LTR providers, or multi-brand retailers

Used EV – Purchase preferences (ASEAN-6)

Where would you purchase your next used EV from?

633 respondents – Multiple choice

Indonesia Malaysia Philippines Singapore Thailand Vietnam

ELECTRIC
VEHICLE
PARKING

2. Consumer Viewpoints

2. EV prospects

Consumers who have declared their intention to buy an Electric Vehicle (BEV or PHEV) in the next 5 years

We have identified five personas amongst future EV customers based on four behavioural dimensions

Key personas

	 Tech Enthusiast	 Dreamers	 Mainstream	 Luxurious	 Frugal
 Environmental Conscience	Concerned about the environment, but not their top priority	Environment and climate change are top priorities	Not particularly concerned about the environment	Environment is among the lowest priorities	Concerned about the environment but outweighed by pricing considerations.
 Technology Confidence	Early adopter, has high confidence with technology	Digital native, feels comfortable with technology	Digital native, feels comfortable with technology	Buys mainstream technology, but uses basic functionalities	Not addicted to technology, uses it to find opportunities
 Price Sensitivity	Willing to pay extra to gain early access to technologies	Is willing to pay a higher price for a good cause	Important but not a priority, seeks good price/quality ratio	Price is not a concern	Price conscious, always looking for bargains
 Car Usage	Combines the car with other means of transport	Doesn't use cars whenever possible	Combines the car with other means of transport	Uses the car as primary transportation	Minimises car usage, preferring cheaper alternatives

degree of fulfillment

2 EV prospects

Luxurious, Tech Enthusiasts and Dreamers demonstrate the strongest intent to make a purchase in the near future

Focus on key personas – EV purchase intention

10,485 respondents (Global)

2,904 respondents (ASEAN-6)

Tech Enthusiast

36% 21% 30% 33%

Dreamers

19% 17% 19% 20%

Mainstream

42% 55% 47% 40%

Luxurious

3% 4% 3% 5%

19%

Source: Strategy& analysis on feedback from consumer survey

China and India lead for Tech Enthusiasts and Dreamers, while ASEAN-6 stands out in Mainstream and Tech Enthusiast clusters

Cluster size per country

10,485 respondents (Global) # 2,904 respondents (ASEAN-6)

Frugal Luxurious Dreamers Tech Enthusiast Mainstream

The primary motivations to consider an EV are lower cost per mile, convenience, and driving experience

Key purchasing drivers

What are main reasons that drive you to buy an EV?

10,485 respondents (Global) – Multiple choice

◆ --- Average ■ APAC ■ EMEA ■ Americas

ASEAN-6's interest lies mainly in medium cars and SUVs, with a consistent distribution across all regions

Purchasing preferences

What type of EV would you buy?

Focus on next slide

What type of body type?

For EVs, the-medium car segment dominate across ASEAN-6 and most regions, while the large cars and other segments are preferred in the Middle East

Purchasing preferences

What type of EV would you buy?

45-70% of EV prospects expect EV prices to be below \$46K, with ASEAN-6 leading in the up to \$11K preference

Purchasing preferences

How much are you expecting to pay for your next EV? (\$'000)

10,485 respondents (Global) APAC EMEA Americas ASEAN-6

2,904 respondents (ASEAN-6)

Cumulative percentage (\$0-46k)

APAC	45%
EMEA	70%
Americas	58%
ASEAN-6	48%

On average, APAC respondents expect to pay more than other regions for the next EV. ASEAN-6 expects a relatively high price, too

Purchasing preferences

How much are you expecting to pay for your next EV?

10,485 respondents (Global)

2,904 respondents (ASEAN-6)

Price and safety top the criteria list for EV prospects in the ASEAN-6 while brand considerations still matter, as well

Purchasing criteria – ASEAN-6

Which are the most important criteria when purchasing a new electric car?

2,904 respondents (ASEAN-6) – Multiple choice

EV prospects in ASEAN-6 face challenges with charging speed, battery durability, and range limitations

Key purchasing barriers – ASEAN-6

What are the key factors that discouraged you to buy an electric vehicle up until now?

2,904 respondents (ASEAN-6) – Multiple choice

EV prospects in ASEAN-6 prefer 300–400 km driving range and charging time under 30 minutes

Charging time and driving range expectations – ASEAN-6

How long would you consider acceptable to charge your car?

What would you consider an acceptable driving range?

Charging time and driving range differ somewhat in ASEAN-6 countries but are in line with global average

Charging time and driving range expectations in ASEAN & Global

How long would you consider acceptable to charge your car?

10,485 respondents (Global) Average time (Minutes)
2,904 respondents (ASEAN-6) Time satisfying for 50% of customers

How long would you consider an acceptable driving range for your car?

10,485 respondents (Global) Average distance (Kilometre)
2,904 respondents (ASEAN-6) Distance to satisfy 50% consumer

2. Consumer Viewpoints

3. EV sceptics

Consumers who have declared their intention not to buy an Electric Vehicle (BEV or PHEV) in the next 5 years

3 EV sceptics

Key inhibitors to buy an EV are primarily the charging time, battery lifespan, and limited range. ASEAN-6 are largely in line with global average

Main reasons for rejection

What are the main reasons that discourage you from buying an EV?

3 EV sceptics

Consumers in ASEAN-6 have significantly different reasons to reject considering an EV

Deep dive on top 3 main reasons for rejection – ASEAN-6

What are the main reasons that discourage you from buying an EV?

510 respondents (ASEAN-6)

Recharging time Uncertainty about battery lifetime Limited range

Section

1. ASEAN-6 Market Snapshot
2. Consumers Viewpoint
- 3. eReadiness Index**
4. Contacts

The eReadiness Index comprises 14 KPIs grouped into four main dimensions for each country in scope

eReadiness Index dimensions, KPIs and weighting

Main dimensions

Government incentives 	Infrastructure 	Supply 	Demand 
Analysis of specific government incentives with focus on: - Grants (purchase subsidies, national grants, scrapping bonus) - VAT reduction - Registration tax reduction - Annual ownership tax exemption	- Installed public charging points per thousand cars (total circulating EV and non-EV fleets) - Installed public fast charging points (>150kW) per highway km - Share of renewable energy generation - Ratio of gasoline to electricity driving cost	- EV share of total registrations - Depreciation rate of a country's top selling EVs - Number of pure EV players present in the market	- Consumers' willingness to buy an EV within the next two years - Share of short distance (<30km per day) drivers - Average household income

Weighting¹

Since government incentives serve as an **external factor** influencing the other three dimensions, the weighting of the primary dimensions is determined through a three-step process:

- **1) Non-incentive index** is calculated for each country (average of Infrastructure, Supply and Demand dimension)
- **2) Global non-incentive index** is calculated as average across all participating countries
- **3) Weighting of eReadiness index** as follows:
 - If *country non-incentive index* < *global non-incentive index*, each main dimension is weighted with 25%
 - If *country non-incentive index* > *global non-incentive index*, Government incentives is weighted with 10%, while Infrastructure, Supply and Demand are weighted with 30%

ASEAN-6 countries are mainly positioned in the middle of the eReadiness index while SG has a leading and PH a lagging position

eReadiness Index

Within ASEAN-6, Singapore is the most e-ready country while regional peers show very different profiles

eReadiness Index – ASEAN-6

Legend:
1 – low eReadiness
5 – high eReadiness

In Northwestern Europe, Norway ranks at the top, confirming its readiness for e-mobility while Eastern Europe is lagging behind

eReadiness Index – Rest of the world (1/2)

For the other countries, China is the most eReady country while Saudi Arabia and UAE are the least mature for e-mobility

eReadiness Index – Rest of the world (2/2)

Legend:
1 – low eReadiness
5 – high eReadiness

Key incentives will be discontinued effective September 30, 2025; this change is not reflected in this year's Index
Notes: Using official OECD data for gross income: The above shown 2024 data was calculated with the weighting system of this 2025 study and therefore slightly differs from the results published in 2024, where each dimension was weighted 25% across all nations;
Source: Strategy& analysis

Government incentives are measured based on consumer fiscal savings and weighted within the index according to each country's eReadiness maturity¹

Dimension overview

KPI		Weight	Definition	Scoring
Grants	>	75%	Total amount of maximum purchase subsidies, national grants, scrapping bonus per EV granted to a consumer by the government	Low (1): 0–3,000€/BEV High (5): > 15,000€/BEV
VAT reduction	>		Exemption or maximum reduction on VAT granted to a consumer when buying an EV	
Registration tax reduction	>		Exemption or maximum reduction on one-off registration taxes, import taxes or CO2/NOx taxes	
Annual ownership tax exemption	>	25%	Total maximum amount of annual ownership tax reductions granted to a consumer by the government	Low (1): 0–333€/BEV High (5): > 1,000€/BEV

The Infrastructure dimension measures the availability of public charging infrastructure as well as the sources and cost of electricity

Dimension overview

KPI		Weight	Definition	Scoring
Charging points per thousand cars	>	50%	Number of public charging points per thousand cars (total circulating EV and non-EV fleet)	Low (1): ≤ 1 High (5): ≥ 3
Penetration of public fast charging points	>	30%	Ratio of public fast charging points (over 150 kW) per km of motorway	Low (1): $\leq 0,1$ High (5): ≥ 1
Renewable energy share	>	10%	Share of renewable energy produced ¹	Low (1): $\leq 40\%$ High (5): $\geq 80\%$
Gasoline vs. electricity cost	>	10%	Ratio of driving costs ² per 100 km of ICE vs. BEV (considering gasoline for ICE and slow charging for EVs)	Low (1): $\leq 2,5$ High (5): $\geq 3,5$

The Supply dimension measures the supply of EVs and their market penetration

Dimension overview

KPI		Weight	Definition	Scoring
BEV penetration	>	50%	Share of BEVs based on total cars sold (2024)	Low (1): < = 10% High (5): > = 50%
Top models annual depreciation	>	25%	Depreciation rate ¹ of top 4 selling models by country from 2020 to 2024 ²	Low (1): < = -15% High (5): > = -5%
Pure EV players	>	25%	Pure EV players ³ with active sales in country	Low (1): < = 1,00 High (5): > = 4,00

1) Within the past 5 years, based on reference prices (not transaction prices) 2) Reference prices for Renault Zoe, Nissan Leaf, Tesla Model S, BMW i3 on selected platforms with search terms of 1st year of registration 2020-2024 and mileage (0, 10K, 20K, 30K and above 40K km) 3) Selection of Aion; Always; e.GO; Farizon; Fisker; Genesis; GWM ORA; Hiper, Hongqi; Lucid; Lynk&Co; Neta; NIO; Polestar; Rivian; Tesla; VinFast; Voyah; Wuling; Xpeng; Zeekr
Source: Strategy& analysis

The Demand dimension leverages the Strategy& eReadiness survey, drawing on first hand data

Dimension overview

KPI		Weight	Definition	Scoring
Willingness to buy	>	33%	Consumer willingness to buy a BEV in the next two years (% of respondents)	Low (1): < = 20% High (5): > = 35%
Share of short distance drivers	>	33%	Share of respondents driving 30km or less per day	Low (1): < = 50% High (5): > = 75%
Household income	>	33%	Average income of consumer respondents to the Strategy& survey	Low (1): < = 40 €k High (5): > = 60 €k

Enhancing eReadiness: Strategic actions for OEMs and stakeholders to accelerate eMobility adoption

Recommendation for OEMs and eMobility key stakeholders

OEMs

Mature markets

Focus on innovation and cost optimisation:

- Enhance product features and shift towards cost-reduction strategies to remain competitive as subsidies phase out.

Strengthen customer loyalty through portfolio diversification:

- Develop a broader range of models to appeal to diverse consumer needs and build lasting customer relationships.

Immature markets

Introduce affordable entry-level EVs:

- Develop and offer affordable, entry-level electric vehicles designed for first-time EV buyers.

Enhance market entry visibility:

- Strengthen brand presence through targeted local marketing and strategic partnerships to build awareness and visibility in new markets.

eMobility Key Stakeholders

e.g. Municipalities, Infrastructure Providers

Expand fast-charging infrastructure:

- Increase the availability of fast-charging stations to improve accessibility and upgrade the network to shorten charging times.

Regulate EV transition and support consumer confidence:

- Implement stricter emission regulations, support fleet electrification, and ensure transparency to maintain public confidence in EVs.

Prioritise charging infrastructure:

- Focus on expanding charging stations in high-density urban areas to improve accessibility and reduce range anxiety for urban EV owners.

Offer government incentives for EV adoption:

- Implement financial incentives to encourage consumers and businesses to adopt EVs and invest in charging infrastructure.
