Demystifying the Blockchain

Lunch Time Talk (Lunch will be provided)

14 November 2018, 12pm – 2pm

Who should attend?

People who want to understand more about the blockchain, how it works, why it should be used , and explore some real-life business applications

A training built to help you discover and understand the basics of blockchain technologies.

Benefits of attending

Blockchain technologies are so far predicted to be the largest technological disruption in our financial and trust systems to date, transforming worldwide industries. At PwC, we explore and understand how decentralized technologies like blockchain are driving shifts to whole new economies.

Yet for many, it is still a concept. This training has been created to demystify the blockchain, enabling you to understand its technology, philosophy and impact on society. Our approach to creating a mindset shift in order for finance professionals to grow as a business partner includes:

- Share knowledge and initiatives about blockchain technologies
- Inspire you to pursue the discovery of these technologies
- Demystify the buzzwords to share real business applications
- Leverage ideas to involve you in the blockchain vision

Workshop agenda

- Introduction
- Getting to Know You
- Approach
- History of Blockchain
- Technology of Blockchain
- Practical current Use Cases
- Exploring the Impact of Blockchain and Future Use Cases
- Q&A

About your workshop leader

Andrew Lebensburger

Andrew is a Manager with PwC's Risk Assurance practice located in Singapore. He has more than seven years of experience in financial services.

His focus is on big data analysis, blockchain, control risk assessments, as well as regulatory compliance rules and regulations for the banking and capital markets industry. Andrew has experience designing and executing compliance-based programs through the development of data analytical tools.

Nathan Moreau

Nathan Moreau is a Product Manager and Emerging Technologist, within PwC's Digital Innovation Office. His role is bridging the gap between technical capabilities and business possibilities. Curious, knowledgeable and detail-oriented professional, Nathan creates the conditions for a collaborative intelligence that delivers new business opportunities.

Passionate about user-centric innovation, technology and entrepreneurship, Nathan acts as a community builder to attract, retain and engage people around blockchain technologies in Switzerland and Singapore.
