

# Tax Data & Analytics Workshop

## *We frequently hear about Big Data, Digital Disruption and how analytics is changing the face of business.*

These things are inherently recognised as being of critical importance, but what does this really mean for us in Tax?

Tax departments have for some time been heavy consumers of data, relying on reports provided and often defined by finance. As tax compliance and regulatory demands increase, so does the burden on the tax department. How do you gather, prepare and disclose more and more information, in shorter timeframes, to the business and to regulators, all whilst reducing costs?

Have you questioned just how much time are you already spending on preparing and reconciling data? Is someone repeating the same manual data handling processes every reporting period? Have you considered how technology could make the process more efficient and free up time to focus on other value-adding tasks?

## *Automation, Visualisation, Discovery*

**Tax Data & Analytics Workshop** intends to provide Tax and Finance professionals with real and practical technology skills and to start you on a journey towards a more technology enabled and productive function.

This full-day workshop will give you practical experience in using automated data transformation and data visualisation tools.

It also covers topics from the broader data domain, data modelling, Robotic Process Automation and how a tax function might use some of these.

## *The Key Objectives*

Attending an Academy will not make you an analytics expert, but it will give you exposure to a selection of software tools and techniques, that will allow you to then consider where automation and data visualisation might best be applied to your processes and reporting scenarios.

Its key objectives are to:

**Teach** - Increase your data literacy and gain new practical skills.

**Discover** - Put visualisation tools into your hands. See how using a data visualisation tool allows you to draw greater insight from your data to improve business decision making.

**Equip** – Understand more about third-party software products that can fill gaps in your tax/finance technology ecosystem; better preparing you to engage in transformation and technology discussions with vendors and/or internal service teams.

## *Who should attend?*

Tax & Finance professionals involved in gathering, preparing and reconciling data for reporting and compliance purposes; and who wants to learn how data visualisation can be used to spot trends, anomalies or any pattern hidden within the data.

## *Want to know more?*

For further information or to discuss how data automation and visualisation could be better used by your team, please contact one of the team below:
