PwC’s Cyber Readiness Health Check
How do you measure if you are cyber ready and how do you get the right message to your investors, customers and regulators?

With the increasing number of cyber attacks and data breaches affecting companies, the public now demands more from organisations in protecting the confidentiality, integrity and availability of sensitive customer data and systems.

PwC’s Cyber Readiness Health Check will provide you with a clear snapshot of the effectiveness of your current cyber security measures and your preparedness in managing cyber risks.

Starting with a high-level assessment with the Board and Audit Committee as interested stakeholders of the report, we then draw on our “cyber capability library” – a set of security capability indicators, which your investors, customers and regulators would be keen to understand. This will enable you to visualise your current security posture and identify hidden gaps to be investigated and mitigated.

We view your security from different dimensions...

Building your cyber confidence
Assessing cyber security helps determine your readiness to detect, prevent, contain and respond to the evolving cyber threats.

Priority
You can’t secure everything. What are your ‘crown jewels’ and how well are they protected?

People matters
Here you build a robust global culture of cyber security starting from the top management to general employees?

Technology
Do you have sufficient technologies to deal with cyber attacks such as Advanced Persistent Threat (APT) and Distributed Denial-of-Service (DDoS)?

Governance
Threats evolve. Do you have a process to monitor, learn from and deal with the emerging trends in cyber attacks?

Connections
Their risk is your risk. Are you confident in your supply chains and business partners’ security?

Incident response
It could happen. Are your current internal protocols equipped to deal with cyber crises? What is the most appropriate manner for external communications?

Connections
Their risk is your risk. Are you confident in your supply chains and business partners’ security?

Evaluate the latest threat landscape you are facing

Assess your readiness to handle massive cyber attacks

Provide insights on your readiness with reference to industry standards

Prioritise your plans to combat with cyber security risks
Focusing on nine key areas

...in our journey together with you

1. Initial Assessment
   Assess current state of readiness through interviews and questionnaires.

2. Deep-dive Testing
   Focused domain reviews and testing based on diagnostic.

3. Risk Analysis
   Identify gaps and improvement areas with regard to regulatory requirements and industry best practices.

4. Reporting & Benchmarking
   Present final report including findings, recommendations, target state of readiness and implementation roadmap.

...to develop a path to enhance your cyber security posture

Our recommendations are prioritised based on the analysis of various factors e.g. benefits/impacts and ease of action, to formulate a roadmap with progressive stages of implementation. This helps you mitigate the cyber risks you are facing and achieve your target state of readiness.
