

Fit for Growth & Digital Finance Trends

www.pwc.com/sk

Businesses are faced with ever-increasing complexity, and to stay still is to fall behind. But the good news is that technology is more accessible than ever for finance functions and we can support you in your journey to make that a reality. Our practical course is designed to give finance managers and automation project owners a grounding in the best data and analytics technology to automate tasks and turn data sets into insightful dashboards. We'll show you what software is out there, how it works and together we'll work through many examples to show you how you can use the technology to improve the way you do your job.

Financial Data Analytics Workshops

Module 1

Optimisation of business processes

Description

Application of data processing technology to bring together outputs from different systems and automate report creating; including checks and validation in the same workflow for easy review. Add visualisation to create dashboards to see trends and be alerted to risks.

Date

19 November 2019

Module 2

Robotic process automation (RPA), chatbot, BRAIN

What are the advantages and limits of AI, machine learning, RPA and how do we leverage these smart engines? Example of how a review process might look like in the near future.
