

PwC would like to invite you to a discussion on issues critical to service operations and process efficiency.

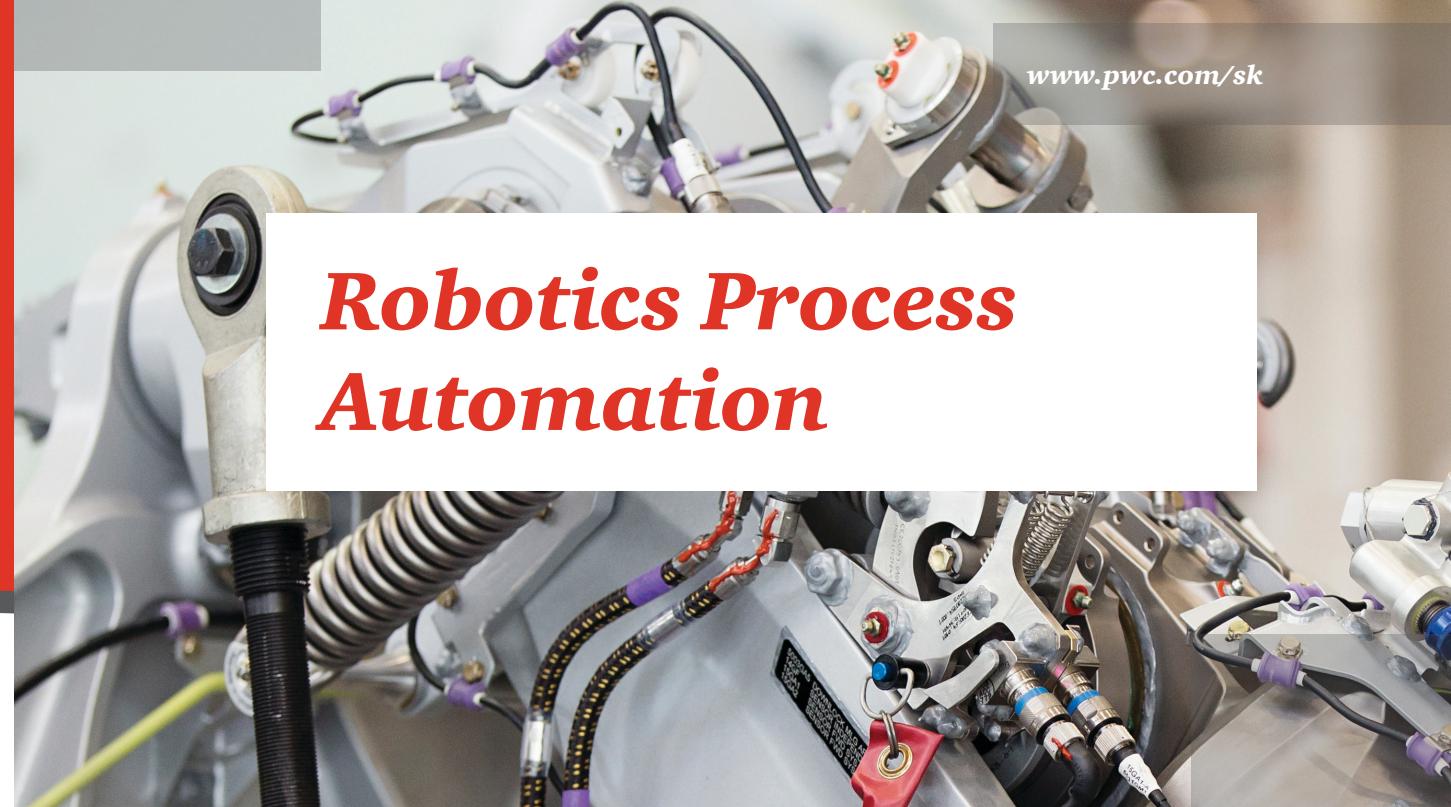

The main theme will be robotics and automation of processes - their purpose and experience with implementation.

Based on our knowledge of the local market, we see that one of the key long-term topics is the challenge of finding more human resources for the provided processes and services. We also see a growing interest in new solutions helping to increase efficiency and release capacity. Robotics Process Automation (RPA) is one of these solutions.

The round table will look at RPA, identify the main challenges, show a real life example and compare outcomes with PwC experience.

Target audience: Finance and Operations Managers, Process Excellence Managers
