How does great design change our interactions with technology?
Learn more about user centered design by watching this video and then expand your knowledge by completing the worksheet below by yourself or with an adult!

**Try It Yourself!**

Designing a product requires you to think about the needs of your users, even if those needs are very different from your own.

In this activity you will be designing a product for the specific needs of a user. This product will be a piece of smart clothing. For this activity, smart clothing can be any piece of clothing that integrates computing technology. It might have sensors that record data, change colors or display information, or even connect to the internet.

In the space below brainstorm different kinds of people (users) who might benefit from smart clothing.

In the space below brainstorm different kinds of people (users) who might benefit from smart clothing.

Choose one of these people and write it here: __________________________________________________

Then brainstorm the needs, interests, and concerns of your user.

Choose one of those needs and write it here: __________________________________________________

Finally, in the space below, write a short description of your product and how it meets the needs of your user. Feel free to draw a picture of what your piece of smart clothing would look like!
