

# Tools to get started

## Data Automation

Streamline your data preparation processes to deliver the tax data that you need quickly and accurately

## Robotics Process Automation

Handle repetitive tax processes 24/7 using software robots

## Data Visualisation

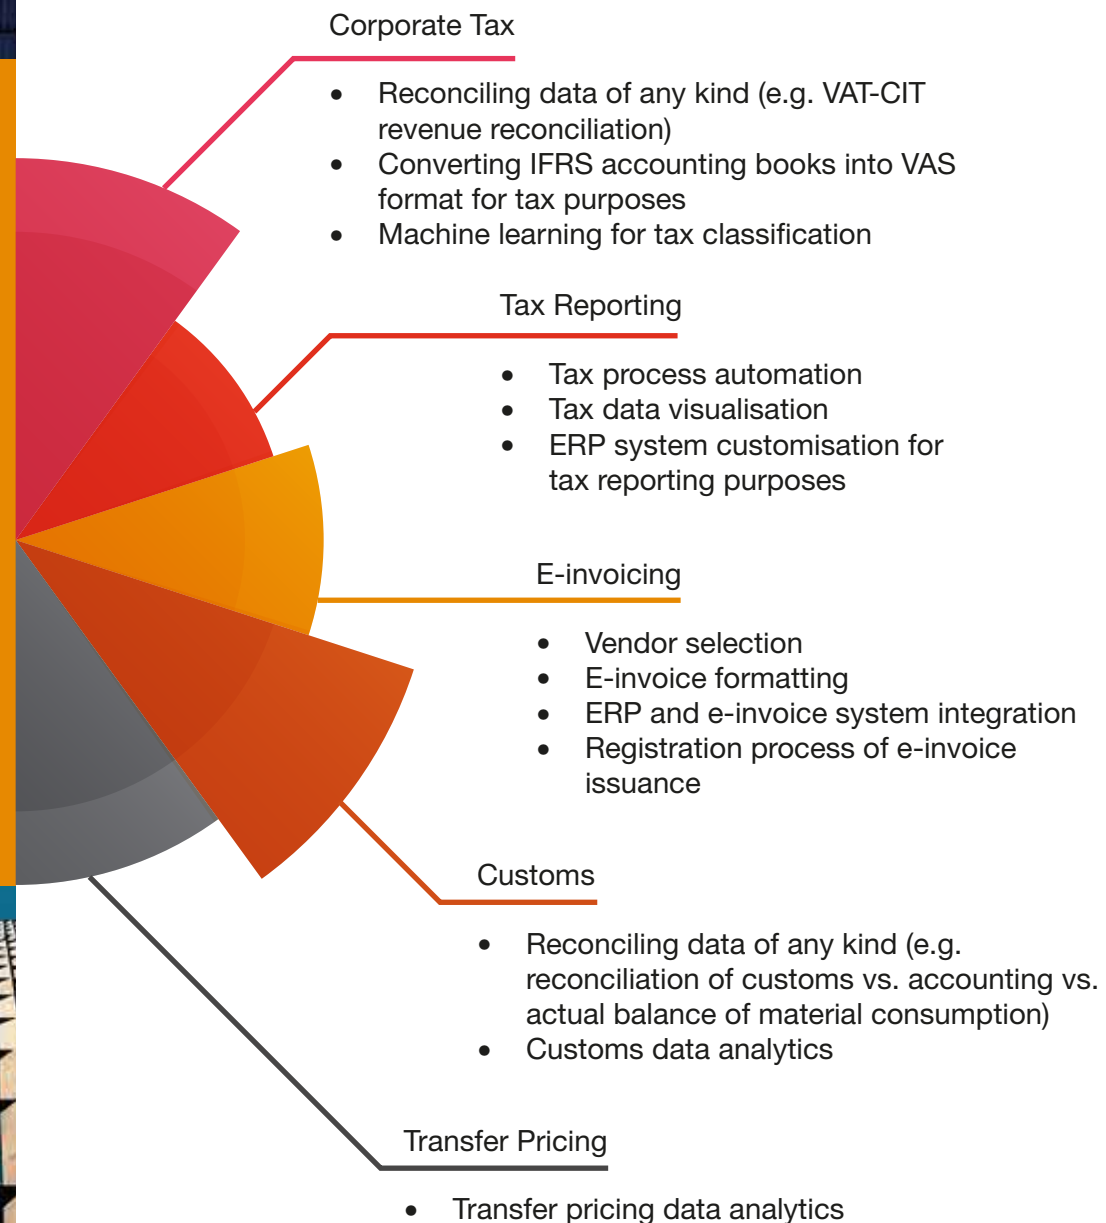

Visualise your data to facilitate business planning and identification of tax risks

## Artificial Intelligence

Accurately classify structured and unstructured data in your tax processes

# How PwC can help

# Tax Technology

Tax Function of the Future

# Opportunities to grow

The way that your tax function uses technology is becoming increasingly important due to budgetary constraints and an increasing workload. Yet, we often see indicators that technology could be used more effectively when we work with our clients.

Common indicators include:

- Significant investment in software that is not properly configured to provide tax data required.
- Considerably time spent preparing data and on compliance tasks.

- Large amounts of data which cannot be fully understood.
- Analysis prepared manually in spreadsheets.
- Uncertainty about how to gain insight from data collected.

## Step-by-step improvement

We believe that making effective use of technology is a journey.

We help our clients to focus on small, discrete projects which are achievable and can quickly provide value. This value is usually a combination of increased speed and accuracy for key tasks.

This step-by-step approach allows client teams to gradually build their technology skill and experience.

With each of these projects, our clients mature and further opportunities become available. While each step is small, the overall impact over time is powerful.

## Our team of specialists in Vietnam

### Hanoi

#### Nghiem Hoang Lan
